Genetic Resources as Natural Information Manuel Ruiz

Muller, 2015-09-16 Demonstrating the shortcomings of current policy and legal approaches to access and benefit sharing ABS in the Convention on Biological Diversity CBD this book recognizes that genetic resources are widely distributed across countries and that bilateral contracts undermine fairness and equity The book offers a practical and feasible regulatory alternative to ensure the goal of fairness and equity is effectively and efficiently met Through a legal analysis that also incorporates historic economic and sociological perspectives the book argues that genetic resources are not tangible resources but information It shows that the existing preference for bilateralism and contracts reflects resistance on the part of many of the stakeholders involved in the CBD process to recognize them as such ABS issues respond very well to the economics of information yet as the author explains these have been either sidelined or overlooked At a time when the Nagoya Protocol on ABS has renewed interest in feasible policy options the author provides a constructive and provocative critique The institutional policy and regulatory framework constitute bounded openness under which fairness and equity emerge

The Oxford Handbook of the International Law of Global Security Robin Geiß, Nils Melzer, 2021-02-16

Understanding the global security environment and delivering the necessary governance responses is a central challenge of the 21st century On a global scale the central regulatory tool for such responses is public international law But what is the state role and relevance of public international law in today's complex and highly dynamic global security environment Which concepts of security are anchored in international law How is the global security environment shaping international law and how is international law in turn influencing other normative frameworks The Oxford Handbook of the International Law of Global Security provides a ground breaking overview of the relationship between international law and global security It

constitutes a comprehensive and systematic mapping of the various sub fields of international law dealing with global security challenges and offers authoritative guidance on key trends and debates around the relationship between public international law and global security governance This Handbook highlights the central role of public international law in an effective global security architecture and in doing so addresses some of the most pressing legal and policy challenges of our time The Handbook features original contributions by leading scholars and practitioners from a wide range of professional and disciplinary backgrounds reflecting the fluidity of the concept of global security and the diversity of scholarship in this area

China as a Twenty-First Century Naval Power Michael A McDevitt, 2020-10-15 Xi Jinping has made his ambitions for the People's Liberation Army PLA perfectly clear there is no mystery what he wants first that China should become a great maritime power and secondly that the PLA become a world class armed force by 2050 He wants this latter objective to be largely completed by 2035 China as a Twenty First Century Naval Power focuses on China's navy and how it is being transformed to satisfy the world class goal Beginning with an exploration of why China is seeking to become such a major maritime power author Michael McDevitt first explores the strategic rationale behind Xi's two objectives China's reliance on foreign trade and overseas interests such as China's Belt and Road strategy In turn this has created concerns within the senior levels of China's military about the vulnerability of its overseas interests and maritime life lines is a major theme McDevitt dubs this China's sea lane anxiety and traces how this has required the PLA Navy to evolve from a near seas focused navy to one that has global reach a blue water navy He details how quickly this transformation has taken place thanks to a patient step by step approach and abundant funding The more than 10 years of anti piracy patrols in the far reaches of the Indian Ocean has acted as a learning curve accelerator to blue water status McDevitt then explores the PLA Navy's role in the South China Sea and the Indian Ocean He provides a detailed assessment of what the PLAN will be expected to do if Beijing chooses to attack Taiwan potentially triggering combat with America's first responders in East Asia especially the U S Seventh Fleet and U S Fifth Air Force He conducts a close exploration of how the PLA Navy fits into China's campaign plan aimed at keeping reinforcing U S forces at arm's length what the Pentagon calls anti access and area denial A2 AD if war has broken out over Taiwan or because of attacks on U S allies and friends that live in the shadow of China McDevitt does not know how Xi defines world class but the evidence from the past 15 years of building a blue water force has already made the PLA Navy the second largest globally capable navy in the world This book concludes with a forecast of what Xi's vision of a world class navy might look like in the next fifteen years when the 2035 deadline is reached

Inverse Heat Conduction Keith A. Woodbury, Hamidreza Najafi, Filippo de Monte, James V. Beck, 2023-03-14 *Inverse Heat Conduction* A comprehensive reference on the field of inverse heat conduction problems IHCPs now including advanced topics numerous practical examples and downloadable MATLAB codes The First Edition of the classic book *Inverse Heat Conduction III Posed Problems* published in 1985 has been used as one of the primary references for researchers and professionals working on

IHCPs due to its comprehensive scope and dedication to the topic The Second Edition of the book is a largely revised version of the First Edition with several all new chapters and significant enhancement of the previous material Over the past 30 years the authors of this Second Edition have collaborated on research projects that form the basis for this book which can serve as an effective textbook for graduate students and as a reliable reference book for professionals Examples and problems throughout the text reinforce concepts presented The Second Edition continues emphasis from the First Edition on linear heat conduction problems with revised presentation of Stolz Function Specification and Tikhonov Regularization methods and expands coverage to include Conjugate Gradient Methods and the Singular Value Decomposition method The Filter Matrix concept is explained and embraced throughout the presentation and allows any of these solution techniques to be represented in a simple explicit linear form Two direct approaches suitable for non linear problems the Adjoint Method and Kalman Filtering are presented as well as an adaptation of the Filter Matrix approach applicable to non linear heat conduction problems In the Second Edition of Inverse Heat Conduction III Posed Problems readers will find A comprehensive literature review of IHCP applications in various fields of engineering Exact solutions to several fundamental problems for direct heat conduction problems the concept of the computational analytical solution and approximate solution methods for discrete time steps using superposition of exact solutions which form the basis for the IHCP solutions in the text IHCP solution methods and comparison of many of these approaches through a common suite of test problems Filter matrix form of IHCP solution methods and discussion of using filter form Tikhonov regularization for solving complex IHCPs in multi layer domain with temperature dependent material properties Methods and criteria for selection of the optimal degree of regularization in solution of IHCPs Application of the filter concept for solving two dimensional transient IHCP problems with multiple unknown heat fluxes Estimating the heat transfer coefficient h for lumped capacitance body and bodies with temperature gradients Bias in temperature measurements in the IHCP and correcting for temperature measurement bias Inverse Heat Conduction is a must have resource on the topic for mechanical aerospace chemical biomedical or metallurgical engineers who are active in the design and analysis of thermal systems within the fields of manufacturing aerospace medical defense and instrumentation as well as researchers in the areas of thermal science and computational heat transfer

Planning for Community-based Disaster Resilience Worldwide Adenrele Awotona, 2016-10-14 We are witnessing an ever increasing level and intensity of disasters from Ecuador to Ethiopia and beyond devastating millions of ordinary lives and causing long term misery for vulnerable populations Bringing together 26 case studies from six continents this volume provides a unique resource that discusses in considerable depth the multifaceted matrix of natural and human made disasters It examines their bearing on the loss of human and productive capital the conduct of national policies and the setting of national development priorities and on the nature of international aid and bilateral assistance strategies and programs of donor countries In order to ensure the efficacy and appropriateness of their support for disaster survivors

international agencies humanitarian and disaster relief organizations scholars non governmental organizations and members of the global emergency management community need to have insight into best practices and lessons learned from various disasters across national and cultural boundaries The evidence obtained from the numerous case studies in this volume serves to build a worldwide community that is better informed about the cultural and traditional contexts of such disasters and better enabled to prepare for respond to and finally rebuild sustainable communities after disasters in different environments The main themes of the case studies include the need for community planning and emergency management to unite in order to achieve the mutual aim of creating a sustainable disaster resilient community coupled with the necessity to enact and implement appropriate laws policies and development regulations for disaster risk reduction the need to develop a clear set of urban planning and urban design principles for improving the built environment s capacities for disaster risk management through the integration of disaster risk reduction education into the curricula of colleges and universities the need to engage the whole community to build inclusive governance structures as prerequisites for addressing climate change vulnerability and fostering resilience and sustainability Furthermore the case studies explore the need to link the existence and value of scientific knowledge accumulated in various countries with decision making in disaster risk management and the relevance and transferability from one cultural context to another of the lessons learned in building institutional frameworks for whole community partnerships

The Cloud Revolution Mark P. Mills, 2021-11-02 The conventional wisdom on how technology will change the future is wrong Mark Mills lays out a radically different and optimistic vision for what's really coming The mainstream forecasts fall into three camps One considers today as the new normal where ordering a ride or food on a smartphone or trading in bitcoins is as good as it's going to get Another foresees a dystopian era of widespread digitally driven job and business destruction A third believes that the only technological revolution that matters will be found with renewable energy and electric cars But according to Mills a convergence of technologies will instead drive an economic boom over the coming decade one that historians will characterize as the Roaring 2020s It will come not from any single big invention but from the confluence of radical advances in three primary technology domains microprocessors materials and machines Microprocessors are increasingly embedded in everything Materials from which everything is built are emerging with novel almost magical capabilities And machines which make and move all manner of stuff are undergoing a complementary transformation Accelerating and enabling all of this is the Cloud history's biggest infrastructure which is itself based on the building blocks of next generation microprocessors and artificial intelligence We've seen this pattern before The technological revolution that drove the great economic expansion of the twentieth century can be traced to a similar confluence one that was first visible in the 1920s a new information infrastructure telephony new machines cars and power plants and new materials plastics and pharmaceuticals Single inventions don't drive great long cycle booms It always takes convergent revolutions in technology's three core spheres information materials and machines Over history that's only happened a few times We have wrung much magic from the technologies that fueled the last long boom But the great convergence now underway will ignite the 2020s And this time unlike any previous historical epoch we have the Cloud amplifying everything The next long boom starts now

China's International Transboundary Rivers Lei Xie, Jia Shaofeng, 2017-12-06 China has forty major transboundary watercourses with neighbouring countries and has frequently been accused of harming its downstream neighbours through its domestic water management policies such as the construction of dams for hydropower This book provides an understanding of water security in Asia by investigating how shared water resources affect China's relationships with neighbouring countries in South East Southeast and Central Asia Since China is an upstream state on most of its shared transboundary rivers the

country's international water policy is at the core of Asia's water security. These water disputes have had strong implications for China's interstate relations and also influenced its international water policy alongside domestic concerns over water resource management. This book investigates China's policy responses to domestic water crises and examines China's international water policy as well as its strategy in dealing with international cooperation. The authors describe the key elements of water diplomacy in Asia which demonstrate varying degrees of effectiveness of environmental agreements. It shows how China has established various institutional arrangements with neighbouring countries primarily in the form of bilateral agreements over hydrological data exchange. Detailed case studies are included of the Mekong, Brahmaputra, Ili and Amur rivers.
