Memo For Paper 1 2014 Maths:

Nuclear Science Abstracts ,1953 *Noncommutative Geometry and Optimal Transport* Pierre

Martinetti, Jean-Christophe Wallet, 2016-10-26 The distance formula in noncommutative geometry was introduced by Connes at the end of the 1980s. It is a generalization of Riemannian geodesic distance that makes sense in a noncommutative setting and provides an original tool to study the geometry of the space of states on an algebra. It also has an intriguing echo in physics for it yields a metric interpretation for the Higgs field. In the 1990s Rieffel noticed that this distance is a noncommutative version of the Wasserstein distance of order 1 in the theory of optimal transport. More exactly, this is a noncommutative generalization of Kantorovich's dual formula of the Wasserstein distance. Connes' distance thus offers an unexpected connection between an ancient mathematical problem and the most recent discovery in high energy physics. The meaning of this connection is far from clear. Yet Rieffel's observation suggests that Connes' distance may provide an interesting starting point for a theory of optimal transport in noncommutative geometry. This volume contains several review papers that will give the reader an extensive introduction to the metric aspect of noncommutative geometry and its possible interpretation as a Wasserstein distance on a quantum space, as well as several topic papers.

Operator Algebras and Their Applications Robert S. Doran, Efton Park, 2016-07-28 This volume contains the proceedings of the AMS Special Session Operator Algebras and Their Applications: A Tribute to Richard V. Kadison, held from January 10-11, 2015, in San Antonio, Texas. Richard V. Kadison has been a towering figure in the study of operator algebras for more than 65 years. His research and leadership in the field have been fundamental in the development of the subject, and his influence continues to be felt through his work and the work of his many students, collaborators, and mentees. Among the topics addressed in this volume are the Kadison-Kaplansky conjecture, classification of C^* -algebras, connections between operator spaces and parabolic induction, spectral flow, C^* -algebra actions, von Neumann algebras, and applications to mathematical physics.

Exploring the Contexts for Early Learning Rory McDowall Clark, 2016-09-01 The concept of readiness for school is attractive to policy makers, but many academics, researchers, and practitioners argue that an early start to formal learning may be misguided. This book introduces readers to an increasing body of evidence which demonstrates that young children need opportunities to learn and develop in environments that support their emotional and cognitive needs, offering opportunities to develop autonomy, competence, and self-regulation skills. With advice on implementing research findings in practice, this book provides clear guidance on how to foster and develop these attributes, scaffold steps into new areas of learning, and support children in facing new challenges. Chapters cover Policy and Discourses, Taking Account of Development, Approaches to Early Years Learning, The Diversity of Children's Early Experiences, Transitions and Starting School, Where to in the Future, Exploring the Contexts for Early Learning. This will be essential reading for students, practitioners, policy makers, and all those interested in the school readiness agenda.
