

KUBOTA TRACTOR

Abstract The purpose of this study was to determine the effect of a 12-week, low-intensity, supervised walking program on the physical and psychological health of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were 40 sedentary, middle-aged women who were randomly assigned to either a supervised walking program or a control group. The walking program consisted of 12 weeks of supervised walking, 3 times per week, for 30 minutes per session. The control group consisted of 20 women who did not participate in the walking program. The subjects were assessed at baseline and at 12 weeks. The walking program had a significant positive effect on the physical and psychological health of the subjects. The walking program significantly improved the subjects' physical health, as measured by the 6-minute walk test, and their psychological health, as measured by the Beck Depression Inventory and the State-Trait Anxiety Inventory. The walking program also significantly improved the subjects' quality of life, as measured by the SF-36. The walking program was well tolerated and had no adverse effects. The results of this study suggest that a 12-week, low-intensity, supervised walking program can improve the physical and psychological health of sedentary, middle-aged women.

How to determine a safe working temperature for your workers

To determine the safe working temperature, the National Institute for Occupational Safety and Health (NIOSH) has developed a formula that takes into account the heat index, humidity, and wind speed. The formula is as follows:

$$T_{safe} = \frac{1}{\left(\frac{1}{T_{hi}} + \frac{1}{T_{hum}} + \frac{1}{T_{wind}} \right)}$$

Where:

- T_{safe} = Safe working temperature
- T_{hi} = Heat index
- T_{hum} = Humidity
- T_{wind} = Wind speed

For example, if the heat index is 80°F, the humidity is 70%, and the wind speed is 10 mph, the safe working temperature would be approximately 65°F.

It is important to note that this formula is only a guideline and should not be used as the sole basis for determining safe working temperatures. Other factors, such as the duration of exposure and the health of the workers, should also be considered.

For more information on safe working temperatures, visit the NIOSH website at <https://www.cdc.gov/niosh>.
