There are many ways to determine what is important and what is not in a document. One way is to use a word count. Another way is to use a word frequency analysis. A word frequency analysis is a statistical analysis of the words in a document. It can be used to determine the relative importance of different words in a document. For example, if a word appears many times in a document, it is likely to be important. Conversely, if a word appears only a few times, it is likely to be less important. Word frequency analysis can be used in many ways. It can be used to identify key words in a document. It can be used to identify the most important topics in a document. It can be used to identify the most important people in a document. Word frequency analysis is a powerful tool for understanding documents.

There is a growing body of research on the effects of the environment on health. This research has shown that the environment can have a significant impact on the health of individuals and communities. For example, exposure to air pollution can lead to respiratory problems, and exposure to lead can lead to developmental delays in children. The environment can also affect mental health, with exposure to natural environments being associated with improved mental health outcomes. This research highlights the importance of understanding the environment's role in health and the need for policies and interventions that address environmental health risks.

1. **Identify the main idea** of the passage. What is the author's primary purpose in writing this text?

the 1990s, the number of people who have been infected with HIV has increased significantly. In the United States, the number of people who have been infected with HIV has increased from about 100,000 in 1980 to over 1 million in 1995. In the United Kingdom, the number of people who have been infected with HIV has increased from about 10,000 in 1980 to over 100,000 in 1995. In the United States, the number of people who have died from AIDS has increased from about 10,000 in 1980 to over 100,000 in 1995. In the United Kingdom, the number of people who have died from AIDS has increased from about 1,000 in 1980 to over 10,000 in 1995.

1. **Identify the problem.** The first step is to identify the problem or issue that needs to be addressed. This involves understanding the current situation, the goals, and the constraints.

**Figure 1** Schematic diagram of the experimental setup. The subject is seated in a chair, viewing a screen displaying a target. The target is a horizontal line. The subject's hand is positioned at the starting point. The distance between the starting point and the target is 10 cm. The subject is instructed to move the hand to the target. The movement is recorded by a video camera. The data is analyzed using a computer program.
