Charles Darwin _____ - answer proposed natural selection as the mechanism of evolution

*Although Wallace submitted his work for publication first, Darwin's work was known to have pre-dated Wallace's work and was much more detailed; therefore, Darwin was given credit for the theory.

Why did dark-colored rock pocket mice first appear in a population of light-colored rock pocket mice? - answer They have a genetic mutation that affects their fur color.

*The rock pocket mice that Dr. Nachman catches in the film have a mutation in a gene that leads to the dark fur color.

Why do dark-colored rock pocket mice on dark lava flows have white bellies? - answer There is no selection for dark bellies by visual predators.

*The color of a rock pocket mouse's belly is not visible to a predator and therefore is not under strong selection pressure.

Mutations are always _____. - answer a change in an individual's DNA

*Mutations are rare genetic changes that can be neutral, beneficial, or detrimental depending on an individual's circumstances. A dark-color fur mutation is good for a rock pocket mouse living on black lava and bad for one living in the sandy desert.

When dark-colored fur gives mice a 1% competitive advantage and 1% of the population begins with dark fur, in about 1000 years, 95% of the population will have dark fur. Which of the following statements is true? - answer If dark-colored rock pocket mice had a competitive advantage of 0.1%, it would take longer for 95% of the population to have dark fur.

*A small evolutionary advantage can lead to large changes in a population. The larger the advantage, the faster the changes occur.

What does Dr. Carroll mean when he says, "while mutation is random, natural selection is not"? - answer- Mutations for advantageous traits are more likely to be passed on to the next generation.

- Natural selection favors some mutations.
- Natural selection acts on traits.
