Climate Change and the Role of Education Walter Leal Filho, Sarah L. Hemstock, 2019-11-28 This book offers insights into the educational dimensions of climate change and promotes measures to improve education in this context. It is widely believed that education can play a key role in finding global solutions to many problems related to climate change. Indeed, education as a process not only helps young people to better understand and address the impact of global warming but also fosters better attitudes and behaviours to aid efforts towards mitigating climate change and adapting to a changing environment. But despite the central importance of education in relation to climate change, there is a paucity of publications on this theme. Against this background, the book focuses on the educational aspects of climate change and showcases examples of research projects and other initiatives aimed at educating various audiences. It also provides a platform for reflections on the role education can play in fostering awareness on a changing climate. Presenting a wide range of valuable lessons learned which can be adapted and replicated elsewhere, the book appeals to educators and practitioners alike.

Labour and Economic Change in Southern Africa c.1900-2000 Rory Pilosof, Andrew Cohen, 2021-06-03 This book explores the social and economic development of Zimbabwe, Zambia and Malawi over the course of the twentieth century. These three countries have long shared and interconnected pasts. All three were drawn into the British Empire at a similar time and the formation of the ill-fated Federation of Rhodesia and Nyasaland formally linked these countries together for a decade in the mid-twentieth century. This formal political relationship created dynamics that resulted in yet closer economic and social links. After Federation, the economic realities of industry, transport and labour supplies meant that these three countries continued to be intricately interconnected. Yet despite these connected pasts, comparative work on the economic histories of Malawi, Zambia and Zimbabwe and how these change over time is rare. This book addresses the gap by providing the first comprehensive collection of labour and census data across the twentieth century for these three countries. The different economic models and performances of these states offer good comparison, allowing researchers to look at different models of development and how these played out over the long term. The book provides data on population growth and change, industrial and occupational structure and the various shifts in what the economically active population did. It will be useful for historians, economists, development studies scholars and non-governmental organisations working on twentieth-century and contemporary southern Africa.
