### The Accounting Cycle: During the Period

---

#### REVIEW QUESTIONS

##### Question 2-1 (LO 2-1)

External transactions are transactions between the company and a separate economic entity. Internal transactions do not include an exchange with a separate economic entity. Purchasing supplies from a local vendor is classified as an external transaction.

##### Question 2-2 (LO 2-1)

1. Use source documents to identify accounts affected by external transactions.
2. Analyze the impact of the transaction on the accounting equation.
3. Assess whether the transaction results in a debit or a credit to the account balance.
4. Record the transaction in the journal using debits and credits.
5. Post the transaction to the T-accounts in the general ledger.
6. Prepare a trial balance.

##### Question 2-3 (LO 2-2)

Dual effect refers to each transaction having an effect on at least two accounts of the accounting equation such that the accounting equation will always be in balance. If an economic event increases (decreases) one side of the equation, then it also increases (decreases) the other side of the equation by the same amount, or, it increases one account and decreases another account on the same side of the equation.

##### Question 2-4 (LO 2-2)

	Assets	=	Liabilities	+	Stockholders' equity
(a)	Increase	=	Increase	+	No change
(b)	Decrease	=	No change	+	Decrease
(c)	Increase	=	No change	+	Increase
(d)	No change*	=	No change	+	No change

\* One asset (equipment) increases while another asset (cash) decreases.

##### Question 2-5 (LO 2-2)

Jerry is not correct. While it is possible for a transaction to increase one account and decrease another, dual effect simply indicates that at least two accounts will always be affected. However, the accounting equation must always remain in balance. It is not possible for one side of the equation to increase while the other side decreases.
