Mcnp 27 Manual:

Nondestructive Assay of Nuclear Materials for Safeguards and Security William H. Geist, Peter A. Santi, Martyn T. Swinhoe, 2024-10-22 This open access book describes the nondestructive assay techniques that are used for the measurement of nuclear material primarily uranium and plutonium for nuclear material accountancy purposes. It is a substantial revision to the so-called PANDA manual that has been a standard reference since its publication in 1991. The book covers the origin and interactions of gamma rays and neutrons as they affect nuclear measurements and also describes the theory and practice of calorimetry. The book gives a description of many instruments based on these techniques that are applied in the field. Although the basic physics has not changed since PANDA was first published, the last thirty years have seen many advances in analysis methods, instrumentation, and applications. The basic descriptions of the origin and interactions of radiation have been updated and include newer references. There have been extensive revisions of the description of gamma detection methods, attenuation correction procedures, and analysis methods, including for the measurement of uranium enrichment and the determination of plutonium isotopic composition. Extensive revisions and additions have also been made to the description of neutron detectors and to the explanation of neutron coincidence techniques. The chapter on neutron multiplicity techniques is a new addition to this edition. The applications of gamma and neutron techniques have been completely overhauled to remove obsolete systems and to include many current applications. The values of and references to nuclear data have been updated. This updated edition is an essential reference for academic researchers and practitioners in the field. This is an open access book. [Handbook of Anatomical Models for Radiation Dosimetry](#) Xie George Xu, Keith F. Eckerman, 2009-09-01 Over the past few decades, the radiological science community has developed and applied numerous models of the human body for radiation protection, diagnostic imaging, and nuclear medicine therapy. The Handbook of Anatomical Models for Radiation Dosimetry provides a comprehensive review of the development and application of these computational models. [Monte Carlo Techniques in Radiation Therapy](#) Frank Verhaegen, Joao Seco, 2021-11-29 About ten years after the first edition comes this second edition of Monte Carlo Techniques in Radiation Therapy. Introduction, Source Modelling, and Patient Dose Calculations are thoroughly updated and extended with the latest topics, edited by Frank Verhaegen and Joao Seco. This book aims to provide a brief introduction to the history and basics of Monte Carlo simulation but again has a strong focus on applications in radiotherapy. Since the first edition, Monte Carlo simulation has found many new applications, which are included in detail. The applications sections in this book cover the following: Modelling transport of photons, electrons, protons, and ions; Modelling radiation sources for external beam radiotherapy; Modelling radiation sources for brachytherapy; Design of radiation sources; Modelling dynamic beam delivery; Patient dose calculations in external beam radiotherapy; Patient dose calculations in brachytherapy; Use of artificial intelligence in Monte Carlo simulations. This book is intended for both students and professionals, both novice and experienced in medical radiotherapy physics. It combines

Power Plant Design and Analysis Codes Development Validation and Application presents the latest research on the most widely used nuclear codes and the wealth of successful accomplishments which have been achieved over the past decades by experts in the field. Editors Wang Li Allison and Hohorst and their team of authors provide readers with a comprehensive understanding of nuclear code development and how to apply it to their work and research to make their energy production more flexible, economical, reliable and safe. Written in an accessible and practical way, each chapter considers strengths and limitations, data availability, needs, verification and validation methodologies and quality assurance guidelines to develop thorough and robust models and simulation tools both inside and outside a nuclear setting. This book benefits those working in nuclear reactor physics and thermal hydraulics as well as those involved in nuclear reactor licensing. It also provides early career researchers with a solid understanding of fundamental knowledge of mainstream nuclear modelling codes as well as the more experienced engineers seeking advanced information on the best solutions to suit their needs. Captures important research conducted over last few decades by experts and allows new researchers and professionals to learn from the work of their predecessors. Presents the most recent updates and developments including the capabilities, limitations and future development needs of all codes. Includes applications for each code to ensure readers have complete knowledge to apply to their own setting. **JJAP, 2006**

Proceedings of the Sixth Meeting of the Task Force on Shielding Aspects of Accelerators, Targets and Irradiation Facilities, 2004 Particle accelerators are used today for an increasing range of scientific and technological applications. They are very powerful tools for investigating the origin and structure of matter and for improving understanding of the interaction of radiation with materials including the transmutation of nuclides and the beneficial or harmful effects of radiation. Particle accelerators are used to identify properties of molecules that can be used in pharmacy for medical diagnosis and therapy and for biophysics studies. Particle accelerators must be operated in safe ways that protect the operators, the population and the environment. New technological and research applications give rise to new issues in radiation shielding. These workshop proceedings review the state of the art in radiation shielding of accelerator facilities and irradiated targets. They also evaluate advancements and discuss the additional developments required to meet radiation protection needs. **OECD Radiation Protection A. Méndez-Vilas, 2004**

Shielding Aspects of Accelerators, Targets and Irradiation Facilities - SATIF 6 NEA Staff, 2004 Particle accelerators are having an increasingly important impact on research technology and lifestyle. Today they cover a wide range of applications including material science and medical applications. In recent years requirements from new technological and research applications have emerged and the number of accelerator facilities has significantly increased. Their parameters such as the beam energy, beam currents and intensities, targets, composition etc vary widely giving rise to new radiation shielding aspects and problems. The main objectives of the SATIF Meetings are to promote the exchange of information among experts in the field of accelerator shielding and related topics, identify areas where international co-operation can be fruitful and carry on a program of work in
