Advancing the development and implementation of regional, national tuberculosis control programs in livestock in africa, asia, and latin america Douwe Bakker, Joram Josephat Buza, Julio Alvarez, Vivek Kapur, 2023-05-11 **Epidemiology and Control of Notifiable Animal Diseases** Julio Álvarez, Douwe Bakker, Javier Bezos, 2019-05-09 Surveillance early detection control and eradication of notifiable animal diseases is of critical importance for countries in order to maintain or improve their animal health status This requires the collaboration of all stakeholders involved including animal health authorities livestock industry and veterinary research institutions among others Prevention control and eradication programs must take into account the characteristics of the host including potential reservoirs the pathogen transmissibility virulence and the environment temperature animal density but also the socio economic context in which they have to be implemented highly influenced by funding availability while at the same time guaranteeing compliance with international trade regulations This has led to the adoption of a wide range of approaches to address the risk posed by specific pathogens in different countries and at the same time similar strategies have yielded very different results in different regions This Research Topic includes a variety of manuscripts focusing on different aspects of surveillance control and eradication of diseases of critical importance for livestock including cattle swine and wildlife in an attempt to provide an overview of the current situation in different countries "Code of Massachusetts regulations, 2015", 2015 Archival snapshot of entire looseleaf Code of Massachusetts Regulations held by the Social Law Library of Massachusetts as of January 2020 September 2019 Monthly Current Affairs with MCQs for Competitive Exams Disha Experts, 2019-09-01 **October 2019 Monthly Current Affairs with MCQs for Competitive Exams** Disha Experts, 2019-09-25 *Neural and Computational Modeling of Movement Control* Ning Lan, Vincent C. K. Cheung, Simon C. Gandevia, 2017-04-17 In the study of sensorimotor systems an important research goal has been to understand the way neural networks in the spinal cord and brain interact to control voluntary movement Computational modeling has provided insight into the interaction between centrally generated commands proprioceptive feedback signals and the biomechanical responses of the moving body Research in this field is also driven by the need to improve and optimize rehabilitation after nervous system injury and to devise biomimetic methods of control in robotic devices This research topic is focused on efforts dedicated to identify and model the neuromechanical control of movement Neural networks in the brain and spinal cord are known to generate patterned activity that mediates coordinated activation of multiple muscles in both rhythmic and discrete movements e g locomotion and reaching Commands descending from the higher centres in the CNS modulate the activity of spinal networks which control movement on the basis of sensory feedback of various types including that from proprioceptive afferents The computational models will continue to shed light on the central strategies and mechanisms of sensorimotor control and learning This research topic demonstrated that computational modeling is playing a more and more prominent role in the studies of postural and movement control With increasing ability

to gather data from all levels of the neuromechanical sensorimotor systems there is a compelling need for novel creative modeling of new and existing data sets because the more systematic means to extract knowledge and insights about neural computations of sensorimotor systems from these data is through computational modeling While models should be based on experimental data and validated with experimental evidence they should also be flexible to provide a conceptual framework for unifying diverse data sets to generate new insights of neural mechanisms to integrate new data sets into the general framework to validate or refute hypotheses and to suggest new testable hypotheses for future experimental investigation It is thus expected that neural and computational modeling of the sensorimotor system should create new opportunities for experimentalists and modelers to collaborate in a joint endeavor to advance our understanding of the neural mechanisms for postural and movement control The editors would like to thank Professor Arthur Prochazka who helped initially to set up this research topic and all authors who contributed their articles to this research topic Our appreciation also goes to the reviewers who volunteered their time and effort to help achieve the goal of this research topic We would also like to thank the staff members of editorial office of Frontiers in Computational Neuroscience for their expertise in the process of manuscript handling publishing and in bringing this ebook to the readers The support from the Editor in Chief Dr Misha Tsodyks and Dr Si Wu is crucial for this research topic to come to a successful conclusion We are indebted to Dr Si Li and Ms Ting Xu whose assistant is important for this ebook to become a reality Finally this work is supported in part by grants to Dr Ning Lan from the Ministry of Science and Technology of China 2011CB013304 the Natural Science Foundation of China No 81271684 No 61361160415 No 81630050 and the Interdisciplinary Research Grant cross Engineering and Medicine by Shanghai Jiao Tong University YG20148D09 Dr Vincent Cheung is supported by startup funds from the Faculty of Medicine of The Chinese University of Hong Kong Guest Associate Editors Ning Lan Vincent Cheung and Simon Gandevia
