based in the USA China Canada Germany Japan Brazil Egypt and India The two volumes are divided into 137 chapters across fourteen sections The first section covers general topics in spinal medicine including anatomy biomechanics physical and neurological examination interventional diagnostics and therapeutics and anaesthesia This is followed by sections on the development of the spine metabolic disorders and bone grafting Subsequent sections focus on surgery for particular parts of the spine including cervical lumbar and thoracic as well as sections on spinal cord injuries and motor preservation Later sections in the book provide information on the spine in paediatrics adult deformity tumours vascular malformations and infections complications of spinal surgery and a final section on minimally invasive techniques Enhanced by 1500 full colour images The Spine Medical and Surgical Conditions is also made available online complete with text images and video with each physical copy Key Points Comprehensive two volume guide to spinal medicine Covers anatomy biomechanics examination diagnostics therapeutics anaesthesia surgery and complications Enhanced by 1500 full colour images Includes access to online version with complete text images and video

Photochemical Water Splitting Neelu Chouhan,Ru-Shi Liu,Jiujun Zhang,2017-01-27 Cleavage of water to its constituents i e hydrogen and oxygen for production of hydrogen energy at an industrial scale is one of the holy grails of materials science That can be done by utilizing the renewable energy resource i e sunlight and photocatalytic material The sunlight and water are abundant and free of cost available at this planet But the development of a stable efficient and cost effective photocatalytic material to split water is still a great challenge To develop the effective materials for photocatalytic water splitting various type of materials with different sizes and structures from nano to giant have been explored that includes metal oxides metal chalcogenides carbides nitrides phosphides and so on Fundamental concepts and state of art materials for the water splitting are also discussed to understand the phenomenon mechanism behind the photoelectrochemical water splitting This book gives a comprehensive overview and description of the manufacturing of photocatalytic materials and devices for water splitting by controlling the chemical composition particle size morphology orientation and aspect ratios of the materials The real technological breakthroughs in the development of the photoactive materials with considerable efficiency are well conversed to bring out the practical aspects of the technique and its commercialization
