Abstract

- **CONCLUSIONS:** The results of this study suggest that the use of a single, standardized, and validated questionnaire is a feasible and reliable method for assessing the prevalence of self-reported mental health problems in a community sample. The results also suggest that the prevalence of self-reported mental health problems is higher in the community than in the clinical population.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.
