

# MANUAL HANDLING

LIFT WITH YOUR LEGS  
KEEP YOUR BACK STRAIGHT  
KNOW YOUR LIMITS

## ASSESS your task FIRST

ASK: Can you fit your arms over the load? Clear any obstacles from your path and know where obstacles will be in an unclear path.

## Position your feet apart

Ensure your legs are shoulder width apart for maximum support. Walk in small steps to maintain shoulder width placement.

## TIGHTEN your abs

Using your core abdominal muscles will hold you in the proper lifting position and reduce strain on your spine.

## LIFT with your LEGS

Bend at the knees & hips not your back - Your leg muscles are stronger than your back and can withstand greater force. This is known as the Sore Shout Technique (Frog Lift).

## Keep your back STRAIGHT

When you keep your back straight (neutral) your legs carry the majority of the weight making you less likely to injure your back.

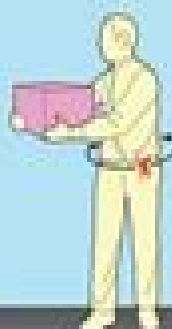

## HOLD the object at waist level and close to the body

Your arms and your back are better equipped to lift a heavy object at waist level and closer to your body than at any other height, similar to how your body.

## Avoid lifting overhead or from below knee height

The risk of injury increases when objects are lifted from overhead or below knee height. Avoid carrying objects at these heights when possible.

## Don't BEND or TWIST while you are lifting or carrying

Improper bending or twisting could throw you off balance or cause injury.

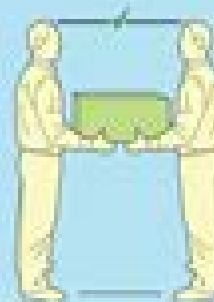

## Use lifting aids

When possible use mechanical aids or get help to lift or carry a heavy load whenever possible. Options include: strapping, conveyor belts, trolleys, cranes or forklifts.

## REDUCE the size of the load when possible

When possible reduce the size of the load or object or make smaller but more frequent trips, e.g. stretch a heavy load into smaller sections.

## Two person lifts

When lifting with two or more people ALWAYS ensure people of same size and strength for manual handling tasks.

## LIMIT

## KNOW your limits!

Ask for help. If you cannot lift an object, don't. Even if the object is not heavy, if it is extremely large or unstable, it can be difficult to lift. It is better to ask and ask for assistance than to try and lift something that could potentially cause injury.

Kulweic, 1991-01-16 Sponsored jointly by the American Society of Mechanical Engineers and International Material Management Society this single source reference is designed to meet today s need for updated technical information on planning installing and operating materials handling systems It not only classifies and describes the standard types of materials handling equipment but also analyzes the engineering specifications and compares the operating capabilities of each type Over one hundred professionals in various areas of materials handling present efficient methods procedures and systems that have significantly reduced both manufacturing and distribution costs **Manual Material Handling** K. H. Kroemer, J. D. McGlothlin, T. G. Bobick, 1989-01-01 *Safety in Manual Materials Handling*, 1978 The problem of injuries from manual materials handling in industry has shown little improvement over many years the injuries account for 20% to 30% of all injuries in many countries During 1974 a NIOSH committee produced a report CDC 99 74 118 Herrin Chaffin and Mach outlining future research needs in this area These research needs were only able to be prioritized in a relatively simple manner at the time Following this report the need was felt for a mechanism to obtain national and international input to help shape NIOSH research policy in the field of Manual Materials Handling Safety The mechanism chosen to obtain this input was an International Symposium Safety in Manual Materials Handling which was held at the State University of New York at Buffalo in July 1976 The objectives of the symposium and of this book reporting its findings were two fold to present a logical and consistent framework for summarizing current knowledge in the field to utilize the expertise of the international community to prioritize

future research by NIOSH within the context of research proceeding in other countries These objectives were accomplished by inviting respected members of the research and safety communities to review parts of the field thus presenting current knowledge in a coherent manner Twenty four papers were presented These began with an overview of the needs of NIOSH proceeded through a review of the sub systems of the body stressed in these tasks continued with numerical models of human performance and safety reviewed the factors that can affect performance and ended with problems of implementation of research In addition to the speakers other prominent figures in the field were invited to chair sessions and lead workshops A number of industries also sent representatives The research areas above are presented as chapters in this book with a final chapter summarizing the results of three goal oriented workshops that took place on the final day of the symposium The findings of these workshops are summarized in the final recommendations It is recommended that any future safety standard must include as a minimum the weight size and position of the load handled and its frequency of handling as well as indicate which loads need preplacement testing of workers Future research needs are for improved diagnosis reporting and job description procedures new epidemiological studies to determine the effect of particular factors and studies to enable the effectiveness of any proposed standard to be estimated
