Borisovich,N.M. Bliznyakov,T.N. Fomenko,Y.A. Izrailevich,2013-03-09 Topology as a subject in our opinion plays a central role in university education It is not really possible to design courses in differential geometry mathematical analysis differential equations mechanics functional analysis that correspond to the temporary state of these disciplines without involving topological concepts Therefore it is essential to acquaint students with topo logical research methods already in the first university courses This textbook is one possible version of an introductory course in topo logy and elements of differential geometry and it absolutely reflects both the authors personal preferences and experience as lecturers and researchers It deals with those areas of topology and geometry that are most closely related to fundamental courses in general mathematics The educational material leaves a lecturer a free choice in designing his own course or his own seminar We draw attention to a number of particularities in our book The first chap ter according to the authors intention should acquaint readers with topolo gical problems and concepts which arise from problems in geometry analysis and physics Here general topology Ch 2 is presented by introducing con structions for example related to the concept of quotient spaces much earlier than various other notions of general topology thus making it possible for students to study important examples of manifolds two dimensional surfaces projective spaces orbit spaces etc as topological spaces immediately *Fifteen Papers on Topology and Logic* Leonid Mikhaĭlovich Abramov,1964
