The age of miniscule computer chips has delivered sweet sounds to modern toy train locomotives. But such systems can add a sour nose when they start acting "funny."

MTH's original ProtoSound and ProtoSound 2.0 systems can create great anxiety when the systems backfire. The culprit is often a component that's hardly hi-tech. It's the battery.

The culprit

Although MTH circuitry continuously recharges the battery whenever you run your locomotive, the original factory-installed NiCad (nickel cadmium) battery deteriorates with age until it can no longer hold a charge or reach its full voltage capacity, no matter how long you charge it. At this point, the battery must be replaced.

MTH reports that fully a third of the locomotives returned for repair could be serviced at home by recharging or replacing the battery.

How do you know the battery in your locomotive is going bad?

If your locomotive is several years old, the sounds stop when you interrupt power, the whistle or horn are distorted below 10 volts, or the locomotive will not sequence through forward, neutral, and reverse properly, your locomotive likely has an undercharged battery.

In MTH's sound systems, a bad NiCad also can create a tech-y problem. As an aging or long-idled battery fails to deliver the voltage needed to allow the sound system to power down properly, the locomotive's computer chip can get "scrambled" – basically, the software becomes jumbled by the electrical irregularities so that the system can no longer think properly. The net effect is usually that the locomotive stays locked in one direction, or the sound sequences become corrupted. If that's the case, there's nothing you can do to get it working properly again except to send the locomotive to MTH, which simply replaces the bad chip.

However, the problem can be avoided entirely by paying attention to the battery before it has a chance to scramble your circuit.

The fix

MTH has this suggestion: If you haven't run a ProtoSound-equipped locomotive for a few months, charge the battery before running the locomotive and cycling through the various sounds. You can charge the battery by removing it and sticking it in the original battery charger (sold at Wal-Mart, among other places). Or simply put
