Corroded deteriorated misaligned and distorted drainage pipes can cause a serious threat to a roadway Normal practice is to remove and replace the damaged drainage structure An alternative method of rehabilitating these structures is to slip line them with a polyethylene liner Twelve drainage structures were slip lined with polyethylene liners during 1994 in Iowa Two types of liners installed were Culvert Renew and Snap Tite It was found that the liners could be easily installed by most highway county and city maintenance departments The liners restore the flow and increase the service life of the original drainage structure The liners were found to be cost competitive compared with the removal and replacement of the existing drainage structure Slip lining has the largest economic benefit when the roadway is paved the culvert is under a deep fill or traffic volumes are high The annular space between the original pipe and the liner was filled with flowable mortar Care should be taken to properly brace and grout the annular space between the liner and the culvert to avoid deformation of the liner      **Ex-Cell-O Handbook and Instruction Manual** Ex-Cell-O Corporation,1947      Case Tractor Manual J.I.
