good understanding of the neural information processing properties that underlie human intelligence Essential aspects of neural information processing are highly parallel execution of computation integration of memory and process and robustness against fluctuations It is believed that intelligent skills such as perception motion and cognition can be easier realized in neuro computers than in a conventional computing paradigm This requires active research in neurobiology to extract computational principles from experimental neurobiological findings in physics and mathematics to study the relation between architecture and function in neural networks and in cognitive science to study higher brain functions such as language and reasoning Neural networks technology has already lead to practical methods that solve real problems in a wide area of industrial applications The clusters on robotics and applications contain sessions on various sub topics in these fields
