Life Science Paper Matric June 2014:

Reagan Iwan Morgan, 2016-09-16 Ronald Reagan is arguably the most successful post war American president A transformational leader he is broadly credited with renewing American prosperity after the stagflation hit 1970s laying the foundations for Cold War victory and bringing about the shift to the right in late twentieth century politics In this new biography Iwan Morgan shrewdly assesses Reagan's considerable achievements whilst also highlighting the shortcomings that were an indisputable part of his record Based on extensive research this book plots a chronological path through Reagan's life covering his upbringing his rise and fall as a Hollywood star his time as California governor and his pursuit of the presidency Morgan offers a detailed evaluation of the pragmatic conservatism that was the hallmark of Reagan's presidential leadership in domestic affairs In the international sphere he explains Reagan's metamorphosis from Cold War hawk to negotiator for nuclear arms reduction while also examining his role in the Iran Contra scandal This book ultimately shows that what made Reagan an American icon above all else was his optimism regarding his country and his ability to articulate its best values even if he himself did not always live up to these Today as the Republican Party grapples with its new direction and identity understanding the legacy of Ronald Reagan and Reaganism is more relevant than ever

Regulation and targeting of enzymes mediating Parkinson's disease pathogenesis: focus on Parkinson's disease Kinases, GTPases and ATPases Jean-Marc Taymans, Veerle Baekelandt, Kirsten Harvey, 2015-02-11 Understanding the molecular pathogenesis of Parkinson's disease PD is a priority in biomedical research and a pre requisite to improve early disease diagnosis and ultimately to developing disease modifying strategies In the past decade and a half geneticists have identified several genes that are involved in the molecular pathogenesis of PD They not only identified gene variants segregating with familial forms of PD but also genetic risk factors of sporadic PD via genome wide association studies GWAS Understanding how PD genes and their gene products function holds the promise of unraveling key PD pathogenic processes Therefore the precise cellular role of PD proteins is currently the subject of intense investigation Interestingly a number of PD proteins have enzymatic functions including kinase GTPase or ATPase functions In the context of understanding disease pathogenesis or developing disease modifying therapies enzymes possess several useful features Firstly enzymes are often key elements of cellular signaling networks acting as on off switches to determine signaling intensity For instance kinases mediate phosphorylation events which activate or inactivate their substrates while GTPases modulate activity of their effector proteins via direct interaction in a GDP GTP dependent manner ATPases also control cellular processes through their involvement in cellular energy production and or in transmembrane transport Secondly enzymes are attractive targets for therapeutics development This is exemplified by the growing number of kinase inhibitors approved for clinical use while compounds modulating GTPases or ATPases have also been proposed as potential therapeutics Finally as elements in cellular signaling networks enzymes are not generally constitutively active but subject to further regulation through additional

signaling components Knowledge of how PD kinases GTPases and ATPases are activated or inactivated can aid in understanding how PD signaling networks are deregulated in disease and point to new possibilities in targeting pathological signaling processes The objective of this research topic is to provide an overview of current knowledge on the regulation of cellular signaling networks of PD kinases GTPases and ATPases Both upstream and downstream signaling events will be covered with a focus on molecular events that can readily be monitored relevance as disease biomarkers and have a potential to be modulated relevance as potential therapeutic target
