*Nostalgia after Apartheid* Amber R. Reed, 2020-11-30 In this engaging book Amber Reed provides a new perspective on South Africa s democracy by exploring Black residents nostalgia for life during apartheid in the rural Eastern Cape Reed looks at a surprising phenomenon encountered in the post apartheid nation despite the Department of Education mandating curricula meant to teach values of civic responsibility and liberal democracy those who are actually responsible for teaching this material and the students taking it often resist what they see as the imposition of white values These teachers and students do not see South African democracy as a type of freedom but rather as destructive of their own African culture whereas apartheid at least ostensibly allowed for cultural expression in the former rural homelands In the Eastern Cape Reed observes resistance to democracy occurs alongside nostalgia for apartheid among the very citizens who were most disenfranchised by the late racist authoritarian regime Examining a rural town in the former Transkei homeland and the urban offices of the Sonke Gender Justice Network in Cape Town Reed argues that nostalgic memories of a time when African culture was not under attack combined with the socioeconomic failures of the post apartheid state set the stage for the current political ambivalence in South Africa Beyond simply being a case study however *Nostalgia after Apartheid* shows how in a global context in which nationalism and authoritarianism continue to rise the threat posed to democracy in South Africa has far wider implications for thinking about enactments of democracy *Nostalgia after Apartheid* offers a unique approach to understanding how the attempted post apartheid reforms have failed rural Black South Africans and how this failure has led to a nostalgia for the very conditions that once oppressed them It will interest scholars of African studies postcolonial studies anthropology and education as well as general readers interested in South African history and politics

*Rugged Individualism and the Misunderstanding of American Inequality* Lawrence M. Eppard, Mark Robert Rank, Heather E. Bullock, 2020-02-20 *Rugged Individualism and the Misunderstanding of American Inequality* explores and critiques the widespread perception in the United States that one s success or failure in life is largely the result of personal choices and individual characteristics As the authors show the distinctively individualist ideology of American politics and culture shapes attitudes toward poverty and economic inequality in profound ways fostering social policies that de-emphasize structural remedies Drawing on a variety of unique methodologies the book synthesizes data from large scale surveys of the American population and it features both conversations with academic experts and interviews with American citizens intimately familiar with the consequences of economic disadvantage This mixture of approaches gives readers a fuller understanding of

skeptical altruism a concept the authors use to describe the American public's hesitancy to adopt a more robust and structurally oriented approach to solving the persistent problem of economic disadvantage **Complicit** Reah

Bravo, 2024-06-18 A brave book that imbues MeToo era discourse with a fresh voice Kate Bolick New York Times bestselling author this is a thoroughly researched and deeply personal examination of how women unintentionally condone workplace abuse and what we can do to change things for the better When Reah Bravo began working at the Charlie Rose show the open secret of Rose's conduct towards women didn't deter her from pursuing a position she thought could launch her career in broadcast journalism She considered herself more than capable of handling any unprofessional behavior that might come her way But she soon learned a devastating truth we don't always react to abusive situations as we imagine we will When we live in a society where many feminist ideals are mainstream and women hold positions of power how is it possible that sexual misconduct remains prevalent When many employers mandate trainings to prevent harassment of all kinds why is workplace abuse still so rampant Weaving her own experience with those of other women and insights from experts Bravo reveals the psychological and cultural forces that make us all enablers of a sexist and dangerous status quo At a critical time in the ongoing fight for gender and racial justice Bravo has written an empathic and concise book that will inspire the next generation of voices courageous enough to rage against the machine Rebecca Carroll author of *Surviving the White Gaze*

How Humans Recognize Objects: Segmentation, Categorization and Individual Identification Chris Fields, 2016-08-18 Human beings experience a world of objects bounded entities that occupy space and persist through time Our actions are directed toward objects and our language describes objects We categorize objects into kinds that have different typical properties and behaviors We regard some kinds of objects each other for example as animate agents capable of independent experience and action while we regard other kinds of objects as inert We re-identify objects immediately and without conscious deliberation after days or even years of non observation and often following changes in the features locations or contexts of the objects being re-identified Comparative developmental and adult observations using a variety of approaches and methods have yielded a detailed understanding of object detection and recognition by the visual system and an advancing understanding of haptic and auditory information processing Many fundamental questions however remain unanswered What for example physically constitutes an object How do specific classically characterizable object boundaries emerge from the physical dynamics described by quantum theory and can this emergence process be described independently of any assumptions regarding the perceptual capabilities of observers How are visual motion and feature information combined to create object information How are the object trajectories that indicate persistence to human observers implemented and how are these trajectory representations bound to feature representations How for example are point light walkers recognized as single objects How are conflicts between trajectory driven and feature driven identifications of objects resolved for example in multiple object tracking situations Are there separate what and where

processing streams for haptic and auditory perception Are there haptic and or auditory equivalents of the visual object file Are there equivalents of the visual object token How are object identification conflicts between different perceptual systems resolved Is the common assumption that persistent object is a fundamental innate category justified How does the ability to identify and categorize objects relate to the ability to name and describe them using language How are features that an individual object had in the past but does not have currently represented How are categorical constraints on how objects move or act represented and how do such constraints influence categorization and the re identification of individuals How do human beings re identify objects including each other as persistent individuals across changes in location context and features even after gaps in observation lasting months or years How do human capabilities for object categorization and re identification over time relate to those of other species and how do human infants develop these capabilities What can modeling approaches such as cognitive robotics tell us about the answers to these questions Primary research reports reviews and hypothesis and theory papers addressing questions relevant to the understanding of perceptual object segmentation categorization and individual identification at any scale and from any experimental or modeling perspective are solicited for this Research Topic Papers that review particular sets of issues from multiple disciplinary perspectives or that advance integrative hypotheses or models that take data from multiple experimental approaches into account are especially encouraged
