Clegg,1999-01 Starting from Mendel's famous experiments this work

develops ideas on genetics and evolution through the historical understanding of patterns of inheritance of how cells are structured and how they function at molecular level Central to this is the way DNA the hereditary material controls and directs all aspects of cellular activity The book shows how this knowledge is used in current developments within the field of genetic engineering and how it has been used to explain the theory of evolution      **Genes and Evolution** ,2016-06-06

Genes and Evolution the latest volume in the Current Topics in Developmental Biology series covers genes and evolution with contributions from an international board of authors The chapters provide a comprehensive set of reviews covering such topics as genes and plant domestication gene networks phenotypic loss in vertebrates reproducible evolutionary changes and epithelial tissue Covers the area of genes and evolution Contains invaluable contributions from an international board of authors Provides a comprehensive set of reviews covering such topics as genes and plant domestication gene networks phenotypic loss in vertebrates reproducible evolutionary changes and epithelial tissue      *Elements of Evolutionary Genetics* Brian Charlesworth,Deborah Charlesworth,2010-02-03 This textbook shows readers how models of the genetic processes involved in evolution are made including natural selection migration mutation and genetic drift in finite populations and how

the models are used to interpret classical and molecular genetic data The material is intended for advanced level undergraduate courses in genetics and evolutionary biology graduate students in evolutionary biology and human genetics and researchers in related fields who wish to learn evolutionary genetics The topics covered include genetic variation DNA sequence variability and its measurement the different types of natural selection and their effects e g the maintenance of variation directional selection and adaptation the interactions between selection and mutation or migration the description and analysis of variation at multiple sites in the genome genetic drift and the effects of spatial structure

**A Secondary Book of Biology** Michael H. Gabb, 1966

**Evolutionary Genetics** Glenn-Peter Sætre, Mark Ravinet, 2019 With recent technological advances vast quantities of genetic and genomic data are being generated at an ever increasing pace The explosion in access to data has transformed the field of evolutionary genetics A thorough understanding of evolutionary principles is essential for making sense of this but new skill sets are also needed to handle and analyze big data This contemporary textbook covers all the major components of modern evolutionary genetics carefully explaining fundamental processes such as mutation natural selection genetic drift and speciation It also draws on a rich literature of exciting and inspiring examples to demonstrate the diversity of evolutionary research including an emphasis on how evolution and selection has shaped our own species Practical experience is essential for developing an understanding of how to use genetic and genomic data to analyze and interpret results in meaningful ways In addition to the main text a series of online tutorials using the R language serves as an introduction to programming statistics and analysis Indeed the R environment stands out as an ideal all purpose source platform to handle and analyze such data The book and its online materials take full advantage of the authors own experience in working in a post genomic revolution world and introduces readers to the plethora of molecular and analytical methods that have only recently become available Evolutionary Genetics is an advanced but accessible textbook aimed principally at students of various levels from undergraduate to postgraduate but also for researchers looking for an updated introduction to modern evolutionary biology and genetics

*Mechanisms of Life History Evolution* Thomas Flatt, Andreas Heyland, 2011-05-12 This interdisciplinary volume unites evolutionary and molecular biologists from various fields life history theory molecular biology developmental biology aging phenotypic plasticity social behaviour and endocrinology who use studies of molecular mechanisms to solve fundamental questions in life history evolution in a variety of organisms

**An Introduction to Evolutionary Genetics** David T. Parkin, 1979

**From DNA to Diversity** Sean B. Carroll, Jennifer K. Grenier, Scott D. Weatherbee, 2013-04-25 In this landmark work the author team led by Dr Sean Carroll presents the general principles of the genetic basis of morphological change through a synthesis of evolutionary biology with genetics and embryology In this extensively revised second edition the authors delve into the latest discoveries incorporating new coverage of comparative genomics molecular evolution of regulatory proteins and elements and microevolution of animal development An accessible text focusing on the most well known genes developmental

processes and taxa Builds logically from developmental genetics and regulatory mechanisms to evolution at different genetic morphological levels Adds major insights from recent genome studies new evo devo biology research findings and a new chapter on models of variation and divergence among closely related species Provides in depth focus on key concepts through well developed case studies Features clear 4 color illustrations and photographs chapter summaries references and a glossary Presents the research of Dr Carroll a pioneer in the field and the past president of the Society for Developmental Biology

**Evolutionary Genetics** John Maynard Smith, 1989 Authored by an internationally prominent figure in the field Evolutionary Genetics unites the molecular and population approaches to evolution to show how population genetics can be applied to real biological problems It explores the mechanisms of evolution covering basic population and quantitative genetics evolutionary game theory evolution of behavior prokaryote evolution evolution of genomes sex recombination breeding systems and sexual selection speciation and macroevolution Throughout science is viewed as a dynamic activity rather than a body of received doctrine and current research is given a comprehensive treatment End of chapter problems with answers and explanations at the back of the book along with computer projects allow students to practice the skills central to problem solving and model making in population and evolution Genetics and the Origin of Species Theodosius Dobzhansky, 1937

**Evolution and Genetics** Thomas Hunt Morgan, 1925 *Evolutionary Biology* Michael T. Clegg, Max K. Hecht, Ross J. MacIntyre, 2000-09-30 After volume 33 this book series was replaced by the journal Evolutionary Biology Please visit [www.springer.com/11692](http://www.springer.com/11692) for further information The nature of science is to work on the boundaries between the known and the unknown These boundaries shift as new methods are developed and as new concepts are elaborated e g the theory of the gene or more recently the coalescence framework in population genetics These tools allow us to address questions that were previously outside the realm of science and as a consequence the boundary between the knowable and unknowable has shifted A study of limits should reveal and clarify the boundaries and make sharper the set of questions This book examines and analyzes these new limits as they are applied to evolutionary biology and population genetics It does this by framing the analysis within four major classes of problems establishing the fact of evolution understanding the evolutionary pathways that led to today's biological world mechanisms of evolutionary change e g models of social behavior sexual selection macro evolution and finally prediction
