21st Century Geography: A Reference Handbook Joseph P. Stoltman, 2011-10-20. Via approximately 80 entries or mini chapters, the SAGE 21st Century Reference Series volumes on geography will highlight the most important topics, issues, questions and debates any student obtaining a degree in this field ought to have mastered for effectiveness in the 21st century. The purpose is to provide undergraduate majors with an authoritative reference source that will serve their research needs with more detailed information than encyclopedia entries but not so much jargon, detail or density as a journal article or a research handbook chapter. Features: Benefits: Curricular driven to provide students with initial footholds on topics of interest in writing research term papers, in preparing for GREs, in consulting to determine directions to take in pursuing a senior thesis, graduate degree etc. Comprehensive to offer full coverage of major subthemes and subfields within the discipline of geography including regional geography, physical geography, global change, human and cultural geography, economic geography and locational analysis, political geography, geospatial technology, cartography, spatial thinking, research methodology, geographical education and more. Uniform in chapter structure to make it easy for students to locate key information with a more or less common chapter format of Introduction, Theory, Methods, Applications, Comparison, Future Directions, Summary, Bibliography, Suggestions for Further Reading and Cross References. Available in print and electronic formats to provide students with convenient, easy access.

CENAS Giuseppe Gambolati, 2012-12-06. The Upper Adriatic Sea basin comprises a very precarious coastal environment subject to continuous changes which prove appreciable not only over the geological scale but also in historical and modern times. According to some Authors, the Venice Lagoon was formed 2000-3000 years ago and other lagoons, e.g. the Grado Lagoon in the northernmost part of the Adriatic, are even more recent. In addition to lagoons, the Upper Adriatic coastal area includes salt and fresh water marshes and reclaimed land separated by several watercourses originating from the Alpine and Apennine ranges with a ground elevation not exceeding in many places 2 m above the mean sea level (msl). A significant fraction of this lowland is already now below msl because of natural and anthropogenic land subsidence. Land reclamation and sea level rise occurred over the last century. Natural land subsidence is still under way as a result of deep downward tectonic movement and consolidation of soils deposited in the most recent time. Anthropogenic subsidence is primarily due to groundwater pumping for agricultural, industrial, civil and tourist use and to gas withdrawal from a large number of gas fields scattered through the Upper Adriatic basin and may still continue although at a reduced rate in the years to come. At the same time, msl is expected to rise in the next century due to global climate change, mainly because of the greenhouse effect.

The Natural and Societal Challenges of the Northern Sea Route Willy Østreng, 2013-04-17. Yohei Sasakawa. The Northern Sea Route is the shortest shipping route connecting the Far East and Europe. However, the route has been practically inaccessible to commercial vessels due to the harsh natural

conditions in the area which make navigation possible for only a small part of the year and then only with an icebreaker leading the way Opening the Northern Sea Route would greatly facilitate international shipping making two routes a northbound one through the NSR and a southbound one through Suez available throughout all seasons The Northern Sea Route would also help to boost economic development including the exploitation of natural resources in Russian regions along the coast of the Arctic Ocean Thanks to international cooperation we have been able to set up and successfully conclude a special project to investigate the possibilities of developing the Northern Sea Route as a commercial route while protecting the environment wildlife and peoples of the Arctic Ocean region This represents a highly significant step in terms of future global development
