## **Jini And Javaspaces Application Development Robert Flenner:**

Jini and JavaSpaces Application Development Robert Flenner, 2001 Jini and JavaSpaces Application Development demonstrates real world usage and application of the Jini technology Specifically the book presents and builds on the concept of a virtual development center It will use the concepts of distributed development open source virtual corporations and the borderless world as a backdrop to developing products and services using Jini and JavaSpaces technologies JBoss Administration and Development Scott Stark, Marc Fleury, 2002 This is the official guide to JBoss written by the creators and developers of JBoss The accompanying CD provides a complete copy of the JBoss server **Sams Teach Yourself Java 2 in 24 Hours** Rogers Cadenhead, 2002 Cadenhead presents a step by step tutorial that teaches someone with no previous programming experience how to create simple Java programs and applets It starts out at a lower level than Sams Teach Yourself Java in 21 Days and takes things at a slower pace focusing on key programming concepts and essential Java basics

Collaborative Networks and Their Breeding Environments Luis M. Camarinha-Matos, Hamideh Afsarmanesh, Angel Ortiz, 2006-03-09 Progress in collaborative networks continues showing a growing number of manifestations and has led to the acceptance of Collaborative Networks CN as a new scientific discipline Contributions to CN coming from multiple reference disciplines has been extensively investigated In fact developments in CN have benefited from contributions of multiple areas namely computer science computer engineering communications and networking management economy social sciences law and ethics etc Furthermore some theories and paradigms defined elsewhere have been suggested by several research groups as promising tools to help define and characterize emerging collaborative organizational forms Although still at the beginning of a long way to go there is a growing awareness in the research and academic world for the need to establish a stronger theoretical foundation for this new discipline and a number of recent works are contributing to this goal From a utilitarian perspective agility has been pointed out as one of the most appealing characteristics of collaborative networks to face the challenges of a fast changing socio economic context However during the last years it became more evident that finding the right partners and establishing the necessary preconditions for starting an effective collaboration process are both costly and time consuming activities and therefore an inhibitor of the aimed agility Among others obstacles include lack of information e g non availability of catalogs with normalized profiles of organizations and lack of preparedness of organizations to join the collaborative process Overcoming the mismatches resulting from the heterogeneity of potential partners e g differences in infrastructures corporate culture methods of work and business practices requires considerable investment Building trust a pre requisite for any effective collaboration is not straight forward and requires time Therefore the effective creation of truly dynamic collaborative networks requires a proper context in which potential members are prepared to rapidly get engaged in collaborative processes The concept of breeding environment has thus emerged as an important facilitator for wider dissemination of collaborative networks and their practical materialization The PRO VE 05

held in Valencia Spain continues the 6th event in a series of successful working conferences on virtual enterprises This book includes selected papers from that conference and should become a valuable tool to all of those interested in the advances and challenges of collaborative networks

**Sams Teach Yourself J2EE in 21 Days** Martin Bond,2002 Sams Teach Yourself J2EE in 21 Days introduces the Java 2 Enterprise Edition to Java programmers in 21 straightforward example driven lessons

**Aspect-oriented Programming with AspectJ** Ivan Kiselev,2003 In a November 2001 Java Pro magazine article noted Java pundit Daniel Savarese states The days of Object Oriented Programming may be numbered One day we may all be using Aspect Oriented Programming While this may be hyperbole the AOP bring certain needed improvements to the OOP AspectJ is a Java based tool that allows developers to apply standard Java syntax to AOP principles much as C allowed C programmers to use C syntax in an object oriented manner There are AspectJ add ons available for Borland s JBuilder Sun s Forte for Java and for the EMACS text editor Aspect Oriented Programming with AspectJ introduces AOP and the AspectJ tool The book also shows how by using existing Java programming knowledge the developer can use AOP in meaningful development work

Scientific Engineering of Distributed Java Applications. Nicoals Guelfi, Egidio Astesiano, Gianna Reggio, 2004-03-09 FIDJI 2003 was an international forum for researchers and practitioners interested in the advances in and applications of software engineering for distributed application development. Concerning the technologies the workshop focused on Java related technologies. It was an opportunity to present and observe the latest research results and ideas in these areas. All papers submitted to this workshop were reviewed by at least two members of the International Program Committee. Acceptance was based primarily on originality and contribution. We selected for these post workshop proceedings 14 papers amongst 29 submitted, two tutorials and one keynote talk. FIDJI 2003 aimed at promoting scientists' approach to software engineering. The scope of the workshop included the following topics: design of distributed Java applications, Java related technologies, software and system architecture, engineering and development methodologies, development methodologies for UML, development methodologies for reliable distributed systems, component based development methodologies, management of evolutions, iterations in the analysis, design, implementation and test phases, dependability support during system life cycles, managing inconsistencies during application development, atomicity and exception handling in system development, software architectures, frameworks and design patterns for developing distributed systems, integration of formal techniques in the development process, formal analysis and grounding of modeling notation and techniques, e.g. UML, metamodeling supporting the security requirements of distributed applications in the development process, refactoring methods, industrial and academic case studies, development and analysis tools. The organization of such a workshop represents an important amount of work.

JavaSpaces in Practice Philip Bishop, Nigel Warren, 2003 The authors show where JavaSpaces are applicable and how to use them effectively in system architecture. A next level book, this title starts right off with designing applications and focuses on the development of code using Spaces to solve specific problems.      Enterprise Java Computing Govind Seshadri, Gopalan
