**International Review of Research in Mental Retardation** ,2007-08-30 Autism Spectrum Disorder is one of the most researched and popular topics in the fields of psychology psychiatry and special education In the last 30 years the amount of new information on assessment and treatment has been astounding The field has moved from a point where many considered the condition untreatable to the current position that it may be curable in some cases and that all persons with this condition can benefit from treatment Intervening with school age children continues to be a major focus of assessment or intervention However expanding the ages of those receiving more attention from younger children to older adults is becoming more prevalent The consensus is that intensive treatment at the earliest recognized age is critical and that many adults evince symptoms of the disorder and warrant care The field is full of many proposed treatments many of which offer promise but no
