**Tree** Peter Day, 1999-01-01 Michael Faraday's social origins his thought processes his methods of experimentation and his religion have all been subjects of exhaustive analysis by historians and philosophers of science One aspect of his work which provides unique insight into his career path and the way in which his mind worked has not received much emphasis outside the realm of academic professionals namely his writing *The Philosopher's Tree Michael Faraday's Life and Work in His Own Words* is an illustrated anthology of Faraday's writings compiled with commentary by Professor Peter Day the director of the Royal Institution of Great Britain From when he was a teenage apprentice bookbinder until his final resignation from the Royal Institution due to failing memory Faraday wrote voluminously and his output took many forms Apart from letters Faraday kept journals both scientific and personal as a practicing scientist he wrote articles in learned journals as an adviser to the government and to many other agencies he wrote reports and as a supremely successful communicator especially to young people he left lecture notes and transcripts All of these writings add life color and depth of focus to the stereotypical scientific colossus Although Faraday's life was largely lived within what might appear to be very narrow geographical confines just a few miles around 21 Albemarle Street in London's West End his professional social and family relationships were extensive and diverse and his responses to them equally complex Through all the forms of expression that his multifaceted career required of him one fact shines clearly not only is Faraday one of the world's greatest scientists he showed enviable quality as a writer *On the Various Forces of Nature* Michael Faraday, 1961 Gravity magnetism and electricity are just a few of the topics covered in this book which includes many experiments **Michael Faraday** Colin A. Russell, 2000

Michael Faraday 1791-1867 the son of a blacksmith described his education as little more than the rudiments of reading writing and arithmetic at a common day school Yet from such basics he became one of the most prolific and wide-ranging experimental scientists who ever lived As a bookbinder's apprentice with a voracious appetite for learning he read every book he got his hands on In 1812 he attended a series of chemistry lectures by Sir Humphry Davy at London's prestigious

Royal Institution He took copious and careful notes and in the hopes of landing a scientific job bound them and sent them to the lecturer Davy was impressed enough to hire the 21 year old as a laboratory assistant In his first decade at the Institution Faraday discovered benzene isobutylene and two chlorides of carbon But despite these and other accomplishments in chemistry he is chiefly remembered for his work in physics In 1831 he proved that magnetism could generate an electric current thereby establishing the field of electromagnetism and leading to the invention of the dynamo In addition to his extraordinary scientific activities Faraday was a leader in his church whose faith and wish to serve guided him throughout his career An engaging public speaker he gave popular lectures on scientific subjects and helped found a tradition of scientific education for children and laypeople that continues to this day Oxford Portraits in Science is an ongoing series of scientific biographies for young adults Written by top scholars and writers each biography examines the personality of its subject as well as the thought process leading to his or her discoveries These illustrated biographies combine accessible technical information with compelling personal stories to portray the scientists whose work has shaped our understanding of the natural world

induction diamagnetism and the laws of electrolysis His inventions of electromagnetic rotary devices formed the foundation of electric motor technology and it was largely due to his efforts that electricity became practical for use in technology As a chemist Faraday discovered benzene investigated the clathrate hydrate of chlorine invented an early form of the Bunsen burner and the system of oxidation numbers and popularised terminology such as anode cathode electrode and ion Faraday ultimately became the first and foremost Fullerian Professor of Chemistry at the Royal Institution of Great Britain a life time position Faraday was an excellent experimentalist who conveyed his ideas in clear and simple language his mathematical abilities however did not extend as far as trigonometry or any but the simplest algebra James Clerk Maxwell took the work of Faraday and others and summarized it in a set of equations that is accepted as the basis of all modern theories of electromagnetic phenomena On Faraday's uses of the lines of force Maxwell wrote that they show Faraday to have been in reality a mathematician of a very high order one from whom the mathematicians of the future may derive valuable and fertile methods The SI unit of capacitance is named in his honour the farad Albert Einstein kept a picture of Faraday on his study wall alongside pictures of Isaac Newton and James Clerk Maxwell Physicist Ernest Rutherford stated When we consider the magnitude and extent of his discoveries and their influence on the progress of science and of industry there is no honour too great to pay to the memory of Faraday one of the greatest scientific discoverers of all time

*Christmas at the Royal Institution* Frank A. J. L. James, 2007 Since the mid 1820s a series of lectures has been delivered each year over the Christmas period in the world famous Faraday Lecture Theatre at The Royal Institution of Great Britain by prominent scientists addressed specifically to an audience of children Initially made accessible in book form the lectures have been nationally televised throughout the UK and distributed worldwide since the 1960s making them accessible to an even larger audience The importance of these lectures in promoting science to a broad audience is perhaps best gauged by the fact that an image of one of Faraday's lectures appeared on the Bank of England £20 note in the 1990s This anthology brings together for the first time a carefully chosen selection of 11 lectures from the 1860s to the 1990s The selection includes lectures by Michael Faraday arguably the most important and influential 19th century physicist and Lawrence Bragg the youngest ever winner of the Nobel Prize Through this work readers will come to grips with the changing nature of popular science lectures over the past 140 years
