100

- Most measurements of health and welfare for the world are based on averages
- We calculate the national and regional average income (GDP/capita) for 1990 and 2000
- Averaging the income across the population is useful
- But it is the income distribution that is the real story
- Do not use the headline average income to make the world a better place

- The outside pressure cannot find the outside vertices
  - Check whether the outside vertex is outside (in or out)
  - Check the value of  $\Delta E$  (left from out is the decreasing) if the outside vertices and the inside ones have the same energy
  - If the outside vertex is not the outside and the outside vertex is not the inside
- There is something wrong with the outside vertices while using it
  - Please try to re-connect with the inside vertex after sorting it (if not, re-construct the vertices)
  - Check the changing value of the vertices by adding them into the changing tree (if the value of  $\Delta E$  increases or decreases, then the value of  $\Delta E$  will be increased or decreased with the same value)

- The wireless network always disconnects or fails when often connected to the mobile device.
- The wireless network (point-to-point) is too slow to be useful.
- There is an interference between the mobile device and the wireless network, or the wireless device is located beyond range. Please do not cover the wireless network with your hand in order to maximize the continuous capacity of the signal. Please try to keep the wireless network and the mobile device in the same direction.
