Instructions for operating the Kango Rotary Hammer Type 950

*Before making any attempt to connect
the hammer to an electric circuit,
please read these instructions carefully*

SUPPLY VOLTAGE AND CURRENT

Check that the electrical supply to the work area is in the tolerance of the hammer.

The circuit should be fixed at a value not less than that given for the rated current on the nameplate of the machine. The fitting of the plug must be checked out by an experienced electrician who will decide on the correct type to use in case of any other faulting in the circuit.

CONNECTING UP

This hammer is electrically wired with a 3 core cable in which the earth connection is grounded and a separate earth wire should not be connected.

Fit the 3 pin plug on the hammer lead into the 3 pin socket on the electric supply lead supplied. The bare end of the supply lead should then be fixed with a plug suitable for the supply point. It is a 3 pin plug it must go to the end of the electric lead and connections must be made in the earth pin.

The 3 pin plug on the hammer lead is normally permanently supplied for use with the optional 15 or 20 ft extension lead, which can be obtained from us on a charge basis.

When the 15 or 20 ft lead is used the ground of the lead should be connected to the terminal plug in form a weather-proof joint. The 15 or 20 ft extension lead may be connected to either another extension lead or the supply lead.

LABORATION

All new hammers are delivered packed with grease and tools for 100.

The quantity of the grease in the hammer is adequate for 100 hours and the hammer should then be lubricated as follows, a Kango Oil or an equivalent Kango oil for servicing.

It is found that tools are running dry in the head of the hammer, a little oil or grease should be applied to the tool at intervals over 100 hours from this, no other lubrication is required between 100 hour service.
