Información comercial española, 1973 Manual de calefacción, 19?? **Manual de Calefacción** LUIS JUTGLAR, ANGEL LLUIS MIRANDA, MIGUEL VILLARRUBIA, 2020-06-21 Esta obra constituye un manual completo para el estudio y el proyecto de las instalaciones de calefacción desde una perspectiva eminentemente práctica sin olvidar el rigor y la necesidad de fundamentar los principios de esta apasionante y necesaria técnica de ingeniería. Para ello los autores han contado con el asesoramiento inestimable de la empresa Ferroli que ha puesto a su disposición todos los medios para que la perspectiva práctica sea realista y actual. La obra consta de seis partes: Teoría, Equipamiento, Aplicaciones, Instalaciones, Respeto al medio ambiente y Anexos. En la parte I Teoría se exponen los principios de psicrometría, las condiciones de bienestar, los principios generales de la calefacción y el agua caliente sanitaria y como tema fundamental el cálculo de la carga térmica de calefacción. Se dedica un capítulo monográfico al estudio de las condensaciones. La parte II Equipamiento se dedica al importante y fundamental estudio de las calderas y de los elementos que nos permitirán construir el sistema de calefacción: tuberías, conductos, bombas y ventiladores. Se dedica una importancia especial al estudio de los emisores, intercambiadores de calor y acumuladores por ser partes fundamentales de una instalación de calefacción. La parte III Aplicaciones es el objetivo principal de la obra. Se estudian los sistemas de calefacción primero de una forma genérica y después centrada en los sistemas: todo agua, todo aire y calefacción eléctrica. Es evidente que se dedica una atención preferente a los sistemas de alta y baja entalpía que son los más habituales en las instalaciones de calefacción. Se termina esta parte con un estudio de los sistemas de ahorro de energía y de contabilidad energética tan importantes en este ambiente actual de subida constante del precio de los combustibles habituales de los sistemas de calefacción. La parte IV Instalaciones se dedica a la sala de máquinas y calderas, chimeneas y conductos de humos, sistema eléctrico y aparillaje, elementos y sistemas de control, ruido y vibraciones, tratamiento y calidad del agua y la forma de prevenir la legionella. La parte V Respeto al medio ambiente está dedicada a las técnicas que se consideran más respetuosas con el medio ambiente. Se estudian las energías renovables: la energía solar, la energía geotérmica y la biomasa. La parte VI está constituida por una serie de anexos. Se ha incluido un formulario que permite al lector apresurado ir directamente a la expresión que necesita. Aquí debemos advertir que la fórmula no debe sacarse del contexto del capítulo por lo que sólo es aconsejable su consulta si se conoce muy bien el tema referenciado. También se

incluyen una serie de consejos prácticos muy generales que están relacionados con lo que el ingeniero llama el buen arte en este caso aplicado a las instalaciones de calefacción. Hay que destacar que la obra contiene numerosos ejercicios y ejemplos para un correcto seguimiento de las explicaciones, así como numerosas tablas y datos prácticos para facilitar el cálculo del proyecto de calefacción. El lector está ante una obra nueva y actual. Se abordan aspectos de tremenda actualidad tales como las instalaciones de agua caliente de baja temperatura con modernas calderas de alta eficiencia, así como las instalaciones solares geotérmicas y de biomasa. *Manual de calefacción* Luis Jutglar, 2011. *Manual de calefacción y A.C.S.*, 1992. **Sistemas de aire forzado**, 2015. *Manual de aire acondicionado y calefacción* Carl Friedrich Müller, Raúl Arriola Juárez, 2010.
