The nurse cares for a client with a cuffed tracheostomy tube. Before performing oral care, the nurse notes that the client's tracheostomy cuff is inflated. Which of the following is the MOST appropriate action for the nurse to take?

1. Leave the cuff inflated and suction through the tracheostomy.
 2. Deflate the cuff and suction through the tracheostomy tube.
 3. Inflate the cuff pressure to 40 mm Hg before suctioning.
 4. Adjust the wall suction pressure to 160 to 180 mm Hg before suctioning.
- 1) **CORRECT** - Implementation: outcome desired; cuff inflation decreases the risk of aspiration; cuff position and pressure should be assessed frequently; swallowing and breathing will cause tracheostomy tube movement
- 2) Implementation: outcome not desired; accumulated oral secretions above the cuff will drain into the bronchi; increased risk of infection
- 3) Implementation: outcome not desired; cuff pressure should be less than 20 mm Hg (25 cm H₂O); risk of trauma to trachea with higher pressures
- 4) Implementation: outcome not desired; increases the risk of trauma to lower airways

A young adult brings a friend to the emergency department and states that the friend has been using heroin. Which action by the nurse is the MOST appropriate?

1. Assess pupil size and reactivity.

Clinical Prediction Models Ewout W. Steyerberg, 2019-07-22 The second edition of this volume provides insight and practical illustrations on how modern statistical concepts and regression methods can be applied in medical prediction problems including diagnostic and prognostic outcomes Many advances have been made in statistical approaches towards outcome prediction but a sensible strategy is needed for model development validation and updating such that prediction models can better support medical practice There is an increasing need for personalized evidence based medicine that uses an individualized approach to medical decision making In this Big Data era there is expanded access to large volumes of routinely collected data and an increased number of applications for prediction models such as targeted early detection of disease and individualized approaches to diagnostic testing and treatment Clinical Prediction Models presents a practical checklist that needs to be considered for development of a valid prediction model Steps include preliminary considerations such as dealing with missing values coding of predictors selection of main effects and interactions for a multivariable model estimation of model parameters with shrinkage methods and incorporation of external data evaluation of performance and usefulness internal validation and presentation formatting The text also addresses common issues that make prediction models suboptimal such as small sample sizes exaggerated claims and poor generalizability The text is primarily intended for clinical epidemiologists and biostatisticians Including many case studies and publicly available R code and data sets the book is also appropriate as a textbook for a graduate course on predictive modeling in diagnosis and prognosis While practical in nature the book also provides a philosophical perspective on data analysis in medicine that goes beyond predictive modeling Updates to this new and expanded edition include A discussion of Big Data and its implications for the design of prediction models Machine learning issues More simulations with missing y values Extended discussion on between cohort heterogeneity Description of ShinyApp Updated LASSO illustration New case studies **Technical Report**, 1980 *The Oxford Handbook of Personnel Assessment and Selection* Neal Schmitt, 2013-12-15 The Oxford Handbook of Personnel Assessment and Selection distills the science and practice of employee selection Now in paperback this volume includes essential information about the validation process individual difference constructs and measures and performance outcomes and measures and will be a comprehensive and authoritative reference and training tool in the field **Medical Risk Prediction Models** Thomas A.
