Manual Cooling Load Estimation From Carrier:

HVAC and Chemical Resistance Handbook for the Engineer and Architect Tom Arimes, 1994 The title is misleading until you check out the contents It is all about HVAC and more This compilation has organized data frequently used by Mechanical Engineers Mechanical Contractors and Plant Facility Engineers The book will end the frustration on a busy day searching for design criteria Cooling Manufacturing Facilities & Applications Charles Nehme, Cooling systems play a crucial role in maintaining optimal conditions within manufacturing facilities impacting product quality equipment longevity worker safety and energy efficiency As manufacturing processes become more complex and sensitive to environmental variables the demand for tailored efficient cooling solutions has intensified In industries ranging from electronics and pharmaceuticals to automotive and food production precise temperature and humidity control are essential for both operational stability and regulatory compliance This book Manufacturing Facilities Cooling and Applications was created to provide a comprehensive guide for engineers facility managers and industry professionals seeking to design implement and maintain cooling systems that meet the unique demands of manufacturing environments By exploring the fundamentals of cooling technology and delving into specific applications across diverse manufacturing sectors this book offers practical insights and tools to achieve effective cooling with a focus on energy efficiency sustainability and cost effectiveness Within these pages you will find discussions on a wide range of cooling systems from direct and indirect cooling methods to the latest advancements in automation and energy saving technologies We will explore the unique challenges posed by various manufacturing processes addressing issues like high heat loads contaminant control and extreme humidity management Real world case studies and examples provide insight into how leading facilities are leveraging innovative cooling solutions to enhance productivity and reduce their environmental footprint It is my hope that this book serves as both an educational resource and a practical reference empowering readers to make informed decisions about cooling system design operation and maintenance By adopting strategies that align with industry best practices and sustainability goals manufacturers can achieve optimal performance while minimizing their impact on the environment Thank you for joining me on this exploration of cooling technology in manufacturing I look forward to the knowledge and innovations that will emerge as we collectively work toward more sustainable and efficient manufacturing facilities Charles Nehme Energy Efficiency of Buildings in Cities United States. Energy Analysis Programs Linda Lawrie, William Klock, Donald J. Leverenz, 1984 The evaluation was performed by comparing building simulations provided by micro programs to those provided by the Building Loads Analysis and System Thermodynamics BLAST program The two micro programs chosen for evaluation OPCOST and SASEAP are representative of the type of bin method calculations used in simplified energy analysis procedures The evaluation was based on four factors 1 the ability of the programs to calculate overall annual building energy consumption 2 their ability to study design options for developing energy efficient new construction 3 their ability to calculate energy savings from various building retrofit options and 4 the amount of input information required which would be considered judgemental in nature as opposed to building description oriented The results of the evaluation showed that the microcomputer energy analysis programs could reasonably predict the proper ranking of design alternatives or retrofit options However the programs could not accurately predict total annual energy consumption Thus the micro programs should not be used to determine compliance with energy budgets Likewise the micro programs could not predict the actual energy savings due to a design alternative or a retrofit option The results did not clearly illustrate which design options were modeled accurately
