Navneet Singh, Here are some common Spring Boot interview questions along with their answers

**What is Spring Boot?** Spring Boot is an open source Java based framework used to create stand alone production grade Spring based applications with minimal setup and configuration

**What are the key features of Spring Boot?** Some key features include Auto configuration It automatically configures the Spring application based on dependencies present in the class path Starter dependencies Pre configured dependencies to simplify dependency management Embedded servers It provides support for embedding servlet containers like Tomcat Jetty and Undertow Production ready features It includes features like metrics health checks and externalized configuration

**Explain the difference between Spring and Spring Boot** Spring is a comprehensive framework for building enterprise level Java applications while Spring Boot is an extension of the Spring framework that simplifies the process of building and deploying Spring applications by providing defaults for configuration and eliminating boilerplate code

**How does Spring Boot simplify the development process?** Spring Boot simplifies development by providing defaults for configuration reducing the amount of boilerplate code and offering a range of pre built features and plugins

**What is Spring Boot Starter?** Spring Boot Starter is a set of convenient dependency descriptors that you can include in your application You can add starters to your application s class path and Spring Boot will automatically configure the appropriate dependencies based on the libraries present

**How does Spring Boot handle configuration?** Spring Boot uses convention over configuration and auto configuration to minimize the need for explicit configuration It provides sensible defaults for configuration and automatically configures components based on the classpath and application properties

**What is Spring Boot Actuator?** Spring Boot Actuator is a set of production ready features that help you monitor and manage your application It includes endpoints for health checks metrics info environment details and more

**Explain the difference between Component Service Repository and Controller annotations in Spring Boot** Component is a generic stereotype annotation for any Spring managed component Service is used to mark a class as a service component in the business layer Repository is used to mark a class as a data access component in the persistence layer Controller is used to mark a class as a controller component in the presentation layer typically for handling HTTP requests

**How does Spring Boot support testing?** Spring Boot provides support for unit testing integration testing and end to end testing using frameworks like JUnit Mockito and Spring Boot Test It includes features like `SpringBootTest` annotation for loading Spring application contexts `MockBean` annotation for mocking beans and `TestRestTemplate` for testing RESTful endpoints

**What is Spring Boot CLI?** Spring Boot CLI Command Line Interface is a command line tool that allows you to quickly develop Spring Boot applications using Groovy scripts It provides features like auto restart dependency management and more directly from the command line

These questions cover some of the fundamental aspects of Spring Boot that are commonly asked in interviews Make sure to understand these concepts thoroughly and be prepared to provide examples or elaborate on them during interviews

platforms making them suitable for developing cross platform applications What is the difference between JDK JRE and JVM  
JDK Java Development Kit is a software development kit that includes tools for developing and compiling Java applications  
such as the Java compiler javac and the Java runtime environment JRE JRE Java Runtime Environment is a runtime  
environment that provides the necessary libraries and components to run Java applications It includes the JVM Java Virtual  
Machine and core Java libraries JVM Java Virtual Machine is an abstract computing machine that provides an execution  
environment for Java bytecode It interprets and executes Java bytecode instructions and manages memory threads and other  
runtime aspects of Java applications What is the difference between abstract class and interface in Java An abstract class is a  
class that cannot be instantiated and may contain abstract methods methods without a body as well as concrete methods It  
can also contain instance variables and constructors Subclasses of an abstract class must implement all abstract methods or  
be declared abstract themselves An interface is a reference type in Java that defines a contract of methods that a class must  
implement It can only contain constant variables and method signatures without method bodies A class can implement  
multiple interfaces but can only extend one abstract class What is the difference between Array List and LinkedList in Java  
Array List is implemented as a dynamic array meaning that it stores elements in a contiguous memory location and supports  
random access to elements using an index It is efficient for accessing elements by index but less efficient for inserting or  
removing elements from the middle of the list LinkedList is implemented as a doubly linked list meaning that it stores  
elements as nodes with references to both the previous and next nodes It is efficient for inserting or removing elements from  
the middle of the list but less efficient for random access These are just a few examples of Java interview questions  
Depending on the role and level of the interview questions may cover more advanced topics such as design patterns  
concurrency memory management and performance optimization It s important to thoroughly prepare for interviews by  
reviewing core Java concepts practicing coding exercises and gaining hands on experience with Java programming 1000
