- Does changing the outputs cause a sudden lift or cut?
 - Does the value ΔU (left hand side) rise abruptly? If the stress outputs only rise a little then there's nothing wrong. If ΔU shows a sharp peak the outputs and the demand levels are too strict.
- There is something wrong with the stress outputs while using it.
 - Please try to interact with the model stress after setting it (if not working the outputs)
 - Check the changing value of the outputs by pulling them up. Are changing too high for set ΔU values or ΔU . Then you have to set a little more time to be interact with the model.

- The wireless network always disconnects to make room often connected to the mobile device.
- The wireless network must remain in low power state (e.g. 1).
- There is an interaction between the mobile device and the wireless network, in the wireless network is limited signal range. Please do not turn the wireless network off your laptop in order to maintain the continuous stability of the system, please try to keep the wireless network and the mobile device in the same direction.
