Congress Brent D. Yacobucci, Congressional Research Service: The Libr, Jasper Womach, 2013-11 In light of a changing regulatory and legislative environment concern has arisen regarding the future prospects for ethanol as a motor fuel Ethanol is produced from biomass mainly corn and is mixed with gasoline to produce cleaner burning fuel called gasohol or E10 The market for fuel ethanol which consumes 10 % of the nation s corn crop is heavily dependent on federal subsidies and regulations A major impetus to the use of fuel ethanol has been the exemption that it receives from the motor fuels excise tax Ethanol is expensive relative to gasoline but it is subject to a federal tax exemption of 5 2 cents per gallon of gasohol or 52 cents per gallon of pure ethanol This exemption brings the cost of pure ethanol which is higher than that of conventional gasoline and other oxygenates within reach of the cost of competitive substances In addition there are other incentives such as a small ethanol producers tax credit It has been argued that the fuel ethanol industry could scarcely survive without these incentives The Clean Air Act requires that ethanol or another oxygenate be mixed with gasoline in areas with excessive carbon monoxide or ozone pollution The resulting fuels are called *Production of Ethanol from Refinery Waste Gases* D.
