Fairbanks,1999-02 Metal, Metal-Oxides and Metal-Organic Frameworks for Environmental Remediation Saravanan Rajendran,Mu. Naushad,Lorena Cornejo Ponce,Eric Lichtfouse,2021-05-05 This book reviews principles techniques and applications of metal metal oxides metal sulfides and metal organic frameworks for removal and degradation of pollutants Natural materials are often much more advanced than synthetic materials in terms of circularity and are functional often biodegradable recyclable and generate little waste They are therefore a source of inspiration for new synthetic materials In particular recent research has focused on various types of functional materials such as organic inorganic nanostructured and composites for the remediation of environmental pollution **DNA Topology and Its Biological Effects** Nicholas R. Cozzarelli,James C. Wang,1990 Photocatalysis for Environmental Remediation and Energy Production Seema Garg,Amrish Chandra,2023-05-06 This book explores the modification of various synthesis processes to enhance the photocatalytic activity in varied applications in the fields of environmental remediation and energy production It outlines the enhancement of photocatalytic activity via alloys synthesis thin film coatings electro spun nanofibers and 3D printed photocatalysts The book further states the diverse applications of materials for degrading organic pollutants and airborne pathogens improving indoor air quality and as a potential antimicrobial agent The application of photocatalysts in green organic synthesis biomedical field and in hydrogen evolution are also presented in the book It covers theoretical studies of photocatalytic material and conversion of CO₂ to value added chemical feed stocks The book is of relevance to researchers in academia and industry alike in the fields of material science environmental science technology photocatalytic applications and in energy generation and conversion Topics in the Study of Life Vincent Gaston Dethier,1971 **Untangling the Double Helix** James C. Wang,2009 The problem of unraveling two intertwined strands during the duplication of DNA was recognized shortly after the proposal of the DNA double helix structure in 1953 A group of enzymes called DNA topoisomerases solve this problem by breaking and rejoining DNA molecules in a controlled manner thereby allowing strands to be passed through each other and thus untangled not just during DNA replication but also during many other basic cellular processes Because of their intimate involvement in the workings of the cell topoisomerases are also the logical targets of many antibiotics including Cipro and anticancer agents This book written by James Wang the discoverer of the first topoisomerase and a leader in the field since presents ten chapters covering the historical backdrop of the DNA entanglement problem and the discovery of the DNA topoisomerases how DNA topoisomerases perform their magic in DNA replication transcription genetic recombination and chromosome condensation and how they are targets of therapeutic agents The book should appeal to readers from undergraduates upwards with interests in the biological and clinical aspects
