

## Unit 7: Worksheet 2

1. Calculate the gravitational field strength on the moon, which has a radius of  $1.74 \times 10^6$  m, and a mass of  $7.36 \times 10^{22}$  kg.
2. How much would a 1500 kg satellite weigh at the surface of the moon? Do it two ways.

Assume that the diagram below represents the orbit of the satellite around the moon at an altitude of 100 km. (make sure to use SI Units!)

3. Construct a force diagram of the satellite in orbit.
4. Demonstrate the direction of the acceleration, if any, by means of a motion map.
5. What is the radius of the orbit of the satellite? (radius of moon + altitude of orbit)

### **Investigating Complex Phenomena: Bridging between Systems Thinking and Modeling in Science Education**

Tom Bielik, Moritz Krell, Laura Zangori, Orit Ben Zvi Assaraf, 2023-11-15 Understanding the complexity of the natural world and making sense of phenomena is one of the main goals of science and science education. When investigating complex phenomena such as climate change or pandemic outbreaks, students are expected to engage in systems thinking by considering the boundaries of the investigated system, identifying the relevant components and their interactions, and exploring system attributes such as hierarchical organization, dynamicity, feedback loops, and emergence. Scientific models are tools that support students' reasoning and understanding of complex systems, and students are expected to develop their modeling competence and to engage in the modeling process by constructing, testing, revising, and using models to explain and predict phenomena. Computational modeling tools, for example, provide students with the opportunity to explore big data, run simulations, and investigate complex systems. Therefore, both systems thinking and modeling approaches are important for science education when investigating complex phenomena.

### **Energy Efficient Manufacturing** John W.

Sutherland, David A. Dornfeld, Barbara S. Linke, 2018-07-04 Over the last several years, manufacturers have expressed increasing interest in reducing their energy consumption and have begun to search for opportunities to reduce their energy usage. In this book, the authors explore a variety of opportunities to reduce the energy footprint of manufacturing. These opportunities cover the entire spatial scale of the manufacturing enterprise, from unit process-oriented approaches to enterprise-level strategies. Each chapter examines some aspect of this spatial scale and discusses and describes the opportunities that exist at that level. Case studies demonstrate how the opportunity may be acted on with practical guidance on how to respond to these opportunities.

### *Innovations as Key to the Green Revolution in Africa* Andre Bationo, Boaz

Waswa, Jeremiah M. Okeyo, Fredah Maina, Job Maguta Kihara, 2011-08-30 Africa can achieve self-sufficiency in food production through adoption of innovations in the agriculture sector. Numerous soil fertility and crop production technologies have been generated through research; however, wide adoption has been low. African farmers need better technologies, more sustainable practices, and fertilizers to improve and sustain their crop productivity and to prevent further degradation of agricultural lands. The agricultural sector also needs to be supported by functional institutions and policies that will be able to respond to emerging challenges of globalization and climate change.

### *Prosodic Theory and Practice* Jonathan

Barnes, Stefanie Shattuck-Hufnagel, 2022-02-08 An introduction to the range of current theoretical approaches to the prosody of spoken utterances with practical applications of those theories. Prosody is an extremely dynamic field with a rapid pace of theoretical development and a steady expansion of its influence beyond linguistics into such areas as cognitive psychology, neuroscience, computer science, speech technology, and even the medical profession. This book provides a set of concise and accessible introductions to each major theoretical approach to prosody, describing its structure and

implementation and its central goals and assumptions as well as its strengths and weaknesses Most surveys of basic questions in prosody are written from the perspective of a single theoretical framework This volume offers the only summary of the full range of current theoretical approaches with practical applications of each theory and critical commentary on selected chapters The current abundance of theoretical approaches has sometimes led to apparent conflicts that may stem more from terminological differences or from differing notions of what theories of prosody are meant to achieve than from actual conceptual disagreement This volume confronts this pervasive problem head on by having each chapter address a common set of questions on phonology meaning phonetics typology psychological status and transcription Commentary is added as counterpoint to some chapters with responses by the chapter authors giving a taste of current debate in the field Contributors Amalia Arvaniti Jonathan Barnes Mara Breen Laura C Dilley Grzegorz Dogil Martine Grice Nina Gr nnum Daniel Hirst Sun Ah Jun Jelena Krivokapi D Robert Ladd Fang Liu Piet Mertens Bernd M bius Gregor M hler Oliver Niebuhr Francis Nolan Janet B Pierrehumbert Santitham Prom on Antje Schweitzer Stefanie Shattuck Hufnagel A E Turk Yi Xu

*Bridge Type Specific Management of Steel Stringer Bridges* Arthur J. Helmicki, 2006 According to the National Bridge Inventory the most common type of short to medium span highway bridge in the US is the reinforced concrete RC slab on steel girder bridge with RC abutments and piers comprising approximately half of Ohio s inventory For these bridges AASHTO currently offers a number of rating methods each of which is based solely on theoretical and design calculations These methods are known to result in subjective conservative ratings not calibrated against field measurements and hence possibly not objectively reflecting the realities and impacts of individual bridge condition as well as design details Visual inspections provide at best qualitative and subjective information on bridge condition which is hard to incorporate into the rating process One result of this approach is the potentially inefficient management and maintenance practices based on conservative subjective ratings and inspection reports In addition there is the need to understand the true impact design and construction practices have on serviceability and safety of the bridge inventory something which cannot be explored based on the current approaches
