Neural Information Processing with Dynamical Synapses Si Wu,Michael K Y Wong,Misha Tsodyks,2015-01-08 **Worlds Without End** Mary-Jane Rubenstein,2014-02-11 Multiverse cosmologies imagine our universe as just one of a vast number of others While this idea has captivated philosophy religion and literature for millennia it is now being considered as a scientific hypothesis with different models emerging from cosmology quantum mechanics and string theory Beginning with ancient Atomist and Stoic philosophies Mary Jane Rubenstein links contemporary models of the multiverse to their forerunners and explores their current emergence One reason is the so called fine tuning of the universe nature s constants are so delicately calibrated it seems they have been set just right to allow life to emerge For some theologians these fine tunings are proof of God for others God is an insufficient explanation One compelling solution if all possible worlds exist somewhere then it is no surprise one of them happens to be suitable for life Yet this hypothesis replaces God with an equally baffling article of faith the existence of universes beyond before or after our own eternally generated yet forever inaccessible In sidestepping metaphysics multiverse scenarios collide with it producing their own counter theological narratives Rubenstein argues however that this interdisciplinary collision provides the condition of its scientific viability reconfiguring the boundaries among physics philosophy and religion
