**Interactions between Bioactive Food Ingredients and Intestinal Microbiota, volume II** Zheng Ruan, Xiaodong Xia, Fengjie Sun, 2024-09-27 This is Volume II of the Research Topic Interactions between Bioactive Food Ingredients and Intestinal Microbiota The previous edition can be found here Numerous microorganisms colonize the gastrointestinal tract playing critical roles concerning digestion and absorption of dietary nutrients and the regulation of important functions including host metabolism immunity and intestinal barrier function Increasing evidence suggests that food encompassing nutrients and polyphenols are strong drivers shaping the composition and function of the gut microbiota and mediate the host's physiological activities directly or indirectly However the mechanisms involved in the interactions between food nutrients prebiotics gut microbiota and host health have not been enlightened to a wide extent Molecular Characterization of Humic Substances and Regulatory Processes Activated in Plants, 2nd edition Serenella Nardi, Luciano Pasqualoto Canellas, Andrea Ertani, Jose M Garcia-Mina, Diego Pizzeghello, Michela Schiavon, 2023-07-18 One of the main challenges of sustainable agriculture is improving food production while reducing significant impact on the soil water and other environmental resources In this context the use of humic substances extracted from different substrates in agricultural practices has been envisioned as a promising nature like and environmental friendly technology to support crop yield and quality Humic substances deriving from chemical and biological transformations of biota materials represent an intrinsic component of soil organic matter SOM consisting of associations of relatively small humic molecules linked together through hydrophobic interactions and hydrogen bonds Because of their distinctive physicochemical features they are used in several industrial and agricultural applications and in remediation technologies for metal contaminated soils Humic substances are of pivotal importance for environmental protection by conditioning soils and improving their stability and resistance to erosion In addition they possess inherent hormone like nature and exhibit biological activity This is often associated with complementary action of soil microbiota and is manifested in their capacity to modulate the transport and bioavailability of nutrients to plants influence root growth and architecture enhance crop yields and regulate the expression of a broad array of genes involved in plant metabolism development and resistance to stress Despite significant efforts to explain the molecular structure of humic substances and its relationship with a plurality of physiological responses and signalling networks triggered in plants several functional aspects still need to be clarified One major issue is that humic substances possess a very complex structure which accounts for their multifaceted biological action Therefore this Research Topic aims to update the knowledge on humic substances by improving the current understanding of their structure and interactions with plants and associated rhizosphere microorganisms thus shining light on the mechanisms and cellular signalling pathways through which humic substances target specific plant metabolic routes and elicit physiological responses Implications of such interactions are expected to be assessed using differential methodological approaches under either

small scale trials or field conditions in view of developing advanced and sustainable agriculture technologies aimed at improving crop yield and food quality

**Plant-Bacteria Association and Symbiosis** Carlos Henrique Meneses, Diogo Neves Proença, Marcia Soares Vidal, German Andres Estrada-Bonilla, 2024-05-21 As a result of the environmental impacts associated with chemical fertilizer misuse society has turned its attention to alternative and sustainable forms of plant nutrition By providing substances that would otherwise be scarce plant growth promoting bacteria PGPBs can influence the availability of nutrients directly affecting plants metabolism In addition to fixing nitrogen and solubilizing phosphorus and iron they also produce hormones such as auxins gibberellins cytokinins and ethylene Studies with PGPB around the world must be directed towards biological control and growth promotion integrated into a sustainable management system Gradually the problems identified in research with biological control are being solved However erratic results regarding the bacterization of cultures frustrate researchers and result from a lack of understanding of plant microorganism interactions dynamics under various environmental conditions *The Journal of the Acoustical Society of America* Acoustical Society of America, 2005
