Abstract. The authors present a new approach to the representation of the spatial structure of a complex system. The approach is based on the use of a hierarchical structure of the system. The authors show that the use of a hierarchical structure allows the representation of the spatial structure of a complex system in a more compact and efficient way than the traditional methods. The authors also show that the use of a hierarchical structure allows the representation of the spatial structure of a complex system in a more compact and efficient way than the traditional methods.

Abstract. *Staphylococcus aureus* is a leading cause of nosocomial infection. The purpose of this study was to determine the prevalence of *S. aureus* in the hospital environment and to identify risk factors for colonization. A total of 1000 samples were collected from various hospital environments. The results showed that *S. aureus* was present in 15% of the samples. The highest prevalence was found in the intensive care unit (ICU) and the operating room. Risk factors for colonization included contact with medical equipment, contact with healthcare workers, and contact with other patients. The study highlights the importance of infection control measures in the hospital environment.
