Scientific Basis for Nuclear Waste Management XXVII Virginia M. Oversby, Lars O. Werme, 2004

Energy, Waste and the Environment

R. Gieré, Peter Stille, 2004 This book provides incentives for further development of sustainable fuel cycles through a novel and interdisciplinary approach to an Earth science related topic The main focus is on geochemical concepts in immobilizing

isolating or neutralizing waste derived from energy production and consumption The book also addresses the issue of using some types of energy derived waste as alternative raw materials Moreover it highlights research on how certain wastes can be used for energy production an increasingly important aspect of modern integrated waste management strategies The main objectives are to a identify the most serious environmental problems related to various types of power generation and associated waste accumulation b present strategies based on natural analogue materials for the immobilization of toxic and radioactive waste components through mineralogical barriers c discuss modern procedures for reuse of waste or certain waste components and d review the importance of geochemical modelling in describing and predicting the interaction between waste and the environment *Mont Terri Rock Laboratory, 20 Years* Paul Bossart, Alan Geoffrey Milnes, 2017-12-20 The international Mont Terri rock laboratory in Switzerland plays a central role in the safety and construction of deep geological nuclear repositories in clay formations The laboratory has developed and refined a range of new measurement and evaluation methods it has e g advanced the determination of rock parameters using innovative borehole geophysics improved the methodology for characterizing pore water and microbial activity in claystones and greatly improved our understanding of diffusion and retention processes of radionuclides in and through claystones The methods and insights described in this compendium can also be applied to low permeability rocks at various sites around the globe and in other fields of application

High Level Radioactive Waste (HLW) Disposal R. Pusch, R. Yong, M. Nakano, 2011-10-17 High Level Radioactive Waste HLW Disposal A Global Challenge presents the most recent information on proposed methods of disposal for the most dangerous radioactive waste and for assessing their function from short and long term perspectives It discusses new aspects of the disposal of such waste especially HLW The book is unique in the literature in making it clear that due to tectonics and long term changes in rock structure rock can serve only as a mechanical support to the chemical apparatus and that effective containment of hazardous elements can only be managed by properly designed and manufactured containers canisters This contradicts the common belief that the rock itself is an effective barrier to the transport of contaminants like radionuclides The importance of the longevity of the containers becomes clear and requires a consideration of all degrading physical chemical processes which occupies a considerable part of the book The book is thus an important contribution to the literature because it proposes design principles that can make repositories for HLW radioactive waste much safer

Radioactive Waste Confinement S. Norris, J. Bruno, M. Van Geet, E. Verhoef, 2017-05-04 It is internationally accepted that the safest and most sustainable option for managing radioactive waste is geological disposal utilizing both engineering and geology to isolate the waste and contain the radioactivity This Special Publication contains 25 scientific studies presented at the 6th conference on Clays in natural and engineered barriers for radioactive waste confinement held in Brussels Belgium in 2015 The conference and this resulting volume cover many of the aspects of clay characterization and behaviour considered at various temporal and spatial scales relevant to the confinement of radionuclides in clay from basic

phenomenological process descriptions to the global understanding of performance and safety at repository and geological scales The papers in this volume consider research into argillaceous media under the following topic areas large scale geological characterization general strategy for clay based disposal systems geomechanics mass transfer bentonite evolution and gas transfer The collection of different topics presented in this Special Publication demonstrates the diversity of geological repository research **Water resources and distribution** William Robert Blain,K.
