Iron Metabolism in Human Health and Disease Kostas Pantopoulos,2025-08-03 This book
provides a state of the art overview on the role of bioiron in health and disease Iron is an essential constituent of simple and
complex organisms and has played a critical role in the origin of life Cells utilize iron for energy metabolism oxygen transport
and several biochemical reactions due to its flexible coordination chemistry and its unique ability to serve both as electron
donor and acceptor The term bioiron was coined to emphasize the importance of iron in biology and medicine Even though
iron is an abundant metal its bioavailability is limiting This often leads to iron deficient states which manifest in anemia and
other co morbidities In fact iron deficiency is the most common medical condition worldwide On the other hand excess iron is
potentially toxic due to its redox reactivity Iron toxicity is illustrated in pathologies of iron overload disorders such as
hereditary hemochromatosis or iron loading anemias Deregulation of iron metabolism is also observed in prevalent metabolic
cardiovascular or neurological disorders Our knowledge of iron metabolism has dramatically increased during the last 30 40
years with the discovery of elegant iron homeostatic networks that operate at the cellular and systemic levels These include
the IRE IRP regulatory system and the hepcidin ferroportin axis The iron hormone hepcidin has emerged as a master
regulator of systemic iron traffic and as a pharmacological target for iron related disorders The book offers a comprehensive

overview of the rapidly growing bioiron field and aims to attract the attention of students basic scientists and clinicians
