Endocrine System

The endocrine system is a system of glands that secrete hormones into the bloodstream. Hormones are chemical messengers that travel through the bloodstream to target organs, where they regulate various functions. The endocrine system is composed of the hypothalamus, pituitary gland, thyroid gland, parathyroid glands, adrenal glands, and the gonads (ovaries in females and testes in males). The hypothalamus is a small region of the brain that controls the pituitary gland. The pituitary gland is a pea-sized structure located at the base of the brain. It secretes hormones that regulate the thyroid gland, parathyroid glands, and the gonads. The thyroid gland is a butterfly-shaped gland located in the neck. It secretes thyroid hormone, which regulates metabolism. The parathyroid glands are four small glands located on the thyroid gland. They secrete parathyroid hormone, which regulates calcium levels in the blood. The gonads are the reproductive glands. In females, the ovaries secrete estrogen and progesterone. In males, the testes secrete testosterone.
