Organic Chemistry Introduction: Learn about organic compounds

Synopsis

What do all living things, and even some non-living things, have in common? They are all built from organic compounds! In the Organic Chemistry Introduction simulation, you will learn what an organic compound is. With your lab assistant Dr. One, you explore how organic compounds are structured, how we name them, and how we represent them in both 2D and 3D.

Test the functional groups

A central concept in Organic Chemistry is functional groups. You will use your acquired knowledge to help your friend, Simon, by determining if a medicine he has received can be trusted. Guided by Dr. One, you will carry out basic chemical tests to verify the functional groups this medicine contains, and learn about some of the ways organic compounds can react.

Make it react

The lab focuses on a high level of interactivity. When working with types of carbon bonds and their angles, you get to build your own 3D carbon molecules on our holetable. In the fume hood, you can make mistakes with the hazardous solutions without consequences, and become comfortable with the equipment we use. Quiz questions on-the-go ensure that you learn the essential points. You can also always look at the Theory pages to extend your knowledge further.
