

## How to write Biological Laboratory Reports.

A biology lab report is a description of the experiment(s) and the results in a concise detailed format. A good reference book for how to write scientifically is *Writing in Biology* by Jan A. Pechenik. The lab report does more than present data, it should also exhibit the writers' breadth of knowledge and comprehension of the question posed. Merely recording the expected and observed data is not enough. Clarifications should be included that exemplify the understanding of the principles of the experimental method and how it was designed to examine the original question. Because it is a written report, certain guidelines for writing must be employed.

- Writing should be in third person with no personal pronouns. The report should also be written in full sentences and easily understood. It should conform to the conventions of standard written English (sentence form, grammar, no slang, spelling, etc.).

- o Contractions are avoided in scientific writing ("the fruit flies did not wake up from anesthesia" rather than "the fruit flies didn't wake up from anesthesia").

- o Numbers at the beginning of a sentence are spelled out. ("Ten milliliters of water was added" instead of "10 ml of water was added")

- o Always be consistent in numerical unit abbreviations. ("Five mls of water was added to 10 mls of solution" instead of "Next, 5 mL of water was added to 10ml of solution")

- o Always define the abbreviations when first used. ("double-distilled water (ddH<sub>2</sub>O)" Following the definition of the abbreviation, the abbreviation may be used in the remainder of the report.

- o Names of species used are written scientifically, (italicized: *Homo sapiens* instead of *Homo sapiens*)

- Use past tense and passive voice describing what has been done.

- o The description of your study, since it has not been published and accepted in the field, is written in the past tense ("carbon dioxide accumulation was higher for
