Labeled Diagram Of A Red Ant:

The Human Nervous System Juergen K Mai, George Paxinos, 2011-12-13 The previous two editions of the Human Nervous System have been the standard reference for the anatomy of the central and peripheral nervous system of the human. The work has attracted nearly 2 000 citations demonstrating that it has a major influence in the field of neuroscience. The 3e is a complete and updated revision with new chapters covering genes and anatomy, gene expression studies and glia cells. The book continues to be an excellent companion to the Atlas of the Human Brain and a common nomenclature throughout the book is enforced. Physiological data, functional concepts and correlates to the neuroanatomy of the major model systems, rat and mouse, as well as brain function, round out the new edition. Adopts standard nomenclature following the new scheme by Paxinos, Watson and Puelles and aligned with the Mai et al Atlas of the Human Brain new edition in 2007. Full color throughout with many new and significantly enhanced illustrations. Provides essential reference information for users in conjunction with brain atlases for the identification of brain structures, the connectivity between different areas and to evaluate data collected in anatomical, physiological, pharmacological, behavioral and imaging studies.

The Art of Terrestrial Diagrams in Early China Michelle H. Wang, 2023-11-21 This is the first English language monograph on the early history of cartography in China. Its chief players are three maps found in tombs that date from the fourth to the second century BCE and together constitute the entire known corpus of ancient Chinese maps, *ditu*. A millennium separates them from the next available map from 1136 CE. Most scholars study them through the lens of modern empirical definitions of maps and their use. This book offers an alternative view by drawing on methods not just from cartography but from art history, archaeology and religion. It argues that as tomb objects, the maps were designed to be simultaneously functional for the living and the dead: that each map was drawn to serve navigational purposes of guiding the living from one town to another, as well as to diagram ritual order, thereby taming the unknown territory of the dead. In contrast with traditional scholarship, *The Art of Terrestrial Diagrams in Early China* proposes that *ditu* can speak through their forms. Departing from dominant theories of representation that forge a narrow path from form to meaning, the book braids together two main strands of argumentation to explore the multifaceted and multifunctional diagrammatic tradition of rendering space in early China.
