

G2H AC Drive Installation Instructions

WARNING: Before Starting, Warning: Frequency Inverter

- Read the entire instruction sheet thoroughly before installation and refer to for safety warnings.
- Ensure the safety of personnel and equipment, only qualified personnel familiar with all drives should install, wire, program, and operate the G2H drive. Always read the instruction sheet thoroughly before using the G2H drive, especially the warnings, cautions and trouble-shooting. If you have any questions, please contact WATSONDIRECT.

PLEASE READ PRIOR TO INSTALLATION FOR SAFETY

	<ul style="list-style-type: none"> The ground terminal of the G2H drive must be grounded correctly. The grounding method must comply with the laws of the country where the G2H drive is to be installed. After power has been turned off, the capacitor in the G2H drive may retain a charge for several minutes. To prevent personal injury, always verify that the "G2H02" LED has turned off. This indicates to confirm that the DC-link voltage has dissipated sufficiently and is less than 200V. Before touching any terminals, a capacitor discharge will take at least 5 minutes for most G2H models. The G2H drive is an internal component of the G2H drive and is sensitive to static electricity. Please do not touch the internal boards with your bare hands before making any cable connection. Please disconnect the internal components in advance. During changes to the wiring, turn off power to the G2H drive before making these changes. When the internal DC-link capacitor in the G2H drive software is in discharge state for making changes to power or wiring, failure to do so may result in short circuit and fire. To prevent personal injury, allow the DC-link voltage to discharge to 0 V and wait before making wiring changes to the G2H drive. Do not touch the G2H drive in locations subject to high temperature, direct sunlight, or flammable materials.
	<ul style="list-style-type: none"> When supply power to the external terminal (R, S, T) of the G2H drive, do not touch during operation of the G2H drive, only for the built-in fan components and connector system in order for the fan to start attempting to provide the G2H drive. Do not use the fan for external components. The same conditions in the G2H drive are easily damaged by high voltage.
	<ul style="list-style-type: none"> Long-term fault signals may result in ineffective water stop or temperature increase if the water stop valve and the water delivery valve are only damaged by the water stop valve. To ensure the safety of the water stop valve, use an external water stop valve on the water stop valve. A water stop valve between the G2H drive and water will stop to integrate effective water. Maximum supply voltage to the G2H drive should be less than or equal to 200V/200V/200V/200V depending on G2H model. Maximum supply current capacity should be less than or equal to 200A for all G2H models. The G2H drive is not to be installed in a place, such as confined and dry location, free from excessive gases or vapors. The G2H drive must be stored within an ambient temperature range from -40°C to +60°C, and relative humidity range of 0% to 95% without condensation. Do not apply 0 V power to the G2H drive with the fan cover removed. Removing a fault of the G2H drive, with 5 seconds before pressing the G2H key. To improve power factor, install a power factor correction capacitor. Do not install power correction capacitor in the main AC supply circuit to the G2H drive to prevent drive fault due to over current.

Attention (Notes)

- AC input power to R/S/T, U/V/W single-phase input, current of the terminals (the applicability of the power input power, please refer to Figure 1 on the following G2H AC Drive User Manual [WATSONDIRECT](#)).
- Ground from the power supply.
- One power to the motor is a three-phase (U, V, W) and one with a phase motor (only).
- Ground to the motor.
- After power is turned off, the drive must be wired through appropriate AC safety-related controls in all drive the safety-related components must be fully in place.

With the correct wiring, the drive can be operated via the keypad, the touch screen, and drive controller via the "WATSONDIRECT" (G2H02) interface to configure the drive for frequent operation.

WATSONDIRECT Safety Warnings

We strongly recommend that customers use the G2H safety features.

The Safe Torque Off (STO) function turns off the power supplied to the motor through the fanboard, or that the motor cannot produce torque. This method of removing power from the motor is considered an emergency stop, also known as "hold to stop".

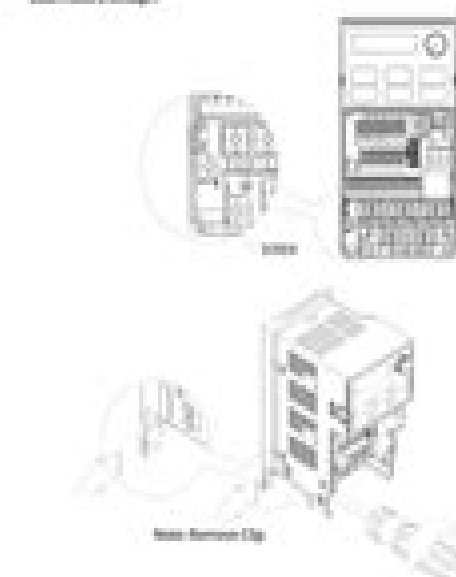

To use the feature, disconnect the appropriate fanboard-mounted jumper and wire a safety relay or safety PLC as shown. The G2H drive position should be wired through a safety relay or PLC to meet category 3 safety requirements. See the following Appendix 1 for wiring the G2H with STO.

Warning: Installation

AC source connection

If the power distribution system supplying the G2H AC drive is a floating (IT) or an ungrounded ground system (not having more 100V inputs), the RFI jumper must be removed. Removing the RFI jumper increases the internal RFI capacity after capacitor between the G2H drive frame and chassis to avoid damaging these capacitors and according to IEC 61800-3 to reduce ground leakage current.
