MAINTENANCE

NOTE: Common maintenance procedures are explained in detail in "General Information."

LUBRICATION

Checking Oil Level

1. To get an accurate oil level reading, the engine must be warm and the machine must be parked on the centerstand on a level surface.
2. Early models have a dipstick fitted to the oil filler cap on top of the crankcase. The cap must be fully screwed in to get the reading. Maintain the oil level between the upper and lower level marks.
3. Other models have a sight glass on the side of the crankcase. Oil level should be maintained between the upper and lower level marks inscribed on the crankcase beside the glass.

Oil level sight glass (B) and level lines (A)

Changing Oil

1. The oil change interval is 1,600 miles. SAE 10W-40, 10W-50, or 20W-50 service rating "SD" or "SE" is recommended.
2. Change oil when the engine is at operating temperature. The machine should be parked on the center stand and on a level surface to ensure full drainage of the oil.
3. Remove the filler cap. Remove the drain plug from the bottom of the crankcase and allow the oil to drain.

4. Clean off the plug (it is magnetic to trap metal particles). Check the condition of the O-ring. Refit, tightening the plug to 14.5-18 ft lbs. on 1974-77 models and 22 ft lbs. on newer machines.
5. If the filter is to be changed, refer to the following section.
6. Add the correct grade and quantity of oil. If the filter has been changed, add 3.0 l/3.2 qt. If the filter has not been changed, add 2.6 l/2.8 qt.
