This is a list of symbols found within all branches of mathematics to express a formula or to replace a constant. When reading the list it is important to recognize that a mathematical concept is independent of the symbol chosen to represent it. For many of the symbols below the symbol is usually synonymous with the corresponding concept ultimately an arbitrary choice made as a result of the cumulative history of mathematics but in some situations a different convention may be used. For example depending on context may represent congruence or a definition. Further in mathematical logic numerical equality is sometimes represented by \equiv instead of $=$ with the latter representing equality of well formed formulas. In short convention dictates the meaning. Each symbol is shown both in HTML whose display depends on the browser's access to an appropriate font installed on the particular device and in X as an image. In mathematics written in Arabic some symbols may be reversed to make right to left writing and reading easier. Some Unicode charts of mathematical operators. Some Unicode cross references. The tilde \sim or \approx is a grapheme with several uses.
