A History of Scientific Journals Aileen Fyfe, Noah Moxham, Julie McDougall-Waters, Camilla Mørk Røstvik, 2022-10-03

Modern scientific research has changed so much since Isaac Newton's day it is more professional collaborative and international with more complicated equipment and a more diverse community of researchers. Yet the use of scientific journals to report share and store results is a thread that runs through the history of science from Newton's day to ours. Scientific journals are now central to academic research and careers. Their editorial and peer review processes act as a check on new claims and findings and researchers build their careers on the list of journal articles they have published. The journal that reported Newton's optical experiments still exists. First published in 1665 and now fully digital the *Philosophical Transactions* has carried papers by Charles Darwin, Dorothy Hodgkin and Stephen Hawking. It is now one of eleven journals published by the Royal Society of London. Unrivalled insights from the Royal Society's comprehensive archives have enabled the authors to investigate more than 350 years of scientific journal publishing. The editorial management business practices and financial difficulties of the *Philosophical Transactions* and its sibling *Proceedings* reveal the meaning and purpose of journals in a changing scientific community. At a time when we are surrounded by calls to reform the academic publishing system it has never been more urgent that we understand its history.

The Secure and the Dispossessed Nick

Buxton, Ben Hayes, 2015-11-20. While the world's scientists and many of its inhabitants despair at the impact of climate change corporate and military leaders see nothing but opportunities. For them melting ice caps mean newly accessible fossil fuels, borders to be secured from climate refugees, social conflicts to be managed and more failed states in which to intervene. They are securing their assets at the expense of the planet and its inhabitants. *The Secure and the Dispossessed* looks at these deadly approaches with a critical eye. It also considers the flip side that the legitimacy of the elite is under unprecedented pressure from resistance by communities to resource grabs to those creating new ecological and socially just models for managing our energy, food and water. Topics covered include geoengineering, militarism, refugee protection, greenwashing and the agricultural crisis among others. Adaptation and resilience to a climate changed world is desperately needed but the form it will take will affect all of our futures.

Vibrio ecology, pathogenesis and evolution Rita R

Colwell, Daniela Ceccarelli, 2014-10-24. *Vibrios* are Gram negative bacilli that occur naturally in marine, estuarine and freshwater systems. Some species include human and animal pathogens capable of causing gastroenteritis, wound infections, cholera and fatal septicemia. Over the past decades cutting edge research on *Vibrio* genomics has promoted a tremendous advance in our knowledge of these pathogens. Significant developments include the discovery of emerging epidemic clones, tracking the spread of new strain variants and an intensified appreciation of the role of mobile genetic elements in antibiotic resistance spread as well as pathogenesis. Furthermore improved understanding of the interaction of *Vibrios* with a variety of living organisms in the aquatic environment has documented the significant role of environmental reservoirs in their seasonal

cycle favoring persistence of the pathogen during inter epidemic periods and enhancing disease transmission This Research Topic is dedicated to our current understanding in these areas and will bring together leading experts in the field to provide a deep overview of Vibrios ecology and evolution and will suggest the pathway of future research in this field
