W. Gibb,1985 A series of experiments was conducted to examine the influence on the uniformity of detonation propagation of air gaps between large blocks of slow cooled cast TNT Donor receptor geometries examined were i two blocks with the detonation front parallel to the gap edge and ii four blocks with one corner in common and the planar detonation front at an angle of 45 deg to the block edge Air gaps from 3 mm to 25 mm were studied The two block configurations produced no distortion of the shape but the measured detonation velocity in the donor blocks and the scatter in results in the receptor blocks were observed to be influenced by the orientation of the propagation velocity vector with respect to the long axis of the TNT crystals The four block configuration featured channelling of detonation gases ahead of the front in the air gaps leading to an initially complex and distorted wave structure as well as to a delay in reinitiation in the vertically opposite receptor block The shape distortion and delay effects increased as the gap width was increased Keywords Slow cooled Crystal orientation Channelling      **Government Reports Announcements** ,1974      **Science Citation Index** ,1992 Vols for 1964 have guides and journal lists      *The Environment Index* ,1986      **Government Reports Announcements & Index** ,1984      Artificial Intelligence Abstracts ,1990      **Environment Abstracts** ,1975      U.S. Government Research & Development Reports ,1969      **The Energy Index** ,1982      *alternative press index* ALTERNATIVE PRESS INDEX,2002      **Bibliography of Scientific and Industrial Reports** ,1969      International Books in Print ,1986      *Building Science N2 SB* ,2015      **N2 Building Science** John Dillon,2017      **Memorandum on Teaching of Building Science** Great Britain.
