Psychology and Mathematics Education Gila Hanna,Laura Macchi,Karin Binder,Laura Martignon,Katharina
Loibl,2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or
previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and
Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational
human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the
second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from
rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive
Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which
humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the
cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving
problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics
Education We want to stress that we are concerned with the view of bounded rationality that is different from the one
espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality
rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to
