Data Assimilation Kody Law, Andrew Stuart, Konstantinos Zygalakis, 2015-09-05 This book provides a systematic treatment of the mathematical underpinnings of work in data assimilation covering both theoretical and computational approaches Specifically the authors develop a unified mathematical framework in which a Bayesian formulation of the problem provides the bedrock for the derivation development and analysis of algorithms the many examples used in the text together with the algorithms which are introduced and discussed are all illustrated by the MATLAB software detailed in the book and made freely available online The book is organized into nine chapters the first contains a brief introduction to the mathematical tools around which the material is organized the next four are concerned with discrete time dynamical systems and discrete time data the last four are concerned with continuous time dynamical systems and continuous time data and are organized analogously to the corresponding discrete time chapters This book is aimed at mathematical researchers interested in a systematic development of this interdisciplinary field and at researchers from the geosciences and a variety of other scientific fields who use tools from data assimilation to combine data with time dependent models The numerous examples and illustrations make understanding of the theoretical underpinnings

of data assimilation accessible Furthermore the examples exercises and MATLAB software make the book suitable for students in applied mathematics either through a lecture course or through self study **Detecting, Modelling and Responding to Effusive Eruptions** A.J.L. Harris,T. De Groeve,F. Garel,S.A. Carn,2016-06-28 For effusive volcanoes in resource poor regions there is a pressing need for a crisis response chain bridging the global scientific community to allow provision of standard products for timely humanitarian response As a first step in attaining this need this Special Publication provides a complete directory of current operational capabilities for monitoring effusive eruptions This volume also reviews the state of the art in terms of satellite based volcano hot spot tracking and lava flow simulation These capabilities are demonstrated using case studies taken from well known effusive events that have occurred worldwide over the last two decades at volcanoes such as Piton de la Fournaise Etna Stromboli and Kilauea We also provide case type response models implemented at the same volcanoes as well as the results of a community wide drill used to test a fully integrated response focused on an operational hazard GIS Finally the objectives and recommendations of the Risk Evaluation Detection and Simulation during Effusive Eruption Disasters working group are laid out in a statement of community needs by its members
