Macmillan/McGraw-Hill Math: Teacher ed., v. 2 ,2004 Type-2 neutrosophic number based multi-attributive border approximation area comparison (MABAC) approach for offshore wind farm site selection in USA Muhammet Deveci,Nuh Erdogan, Umit Cali,Joseph Stekli ,Shuya Zhong, This approach combines the advantages of neutrosophic numbers sets which can utilize uncertain and incomplete information with a multi attributive border approximation area comparison that provides formulation flexibility and easy calculation Further this study develops and integrates a techno economic model for OWFs in the decision making A case study is performed to evaluate and rank five proposed OWF sites off the coast of New Jersey To validate the proposed model a comparison against three alternative T2NN fuzzy based models is performed It is demonstrated that the implemented model yields the same ranking order as the alternative approaches Sensitivity analysis reveals that changing criteria weightings does not affect the ranking order Computational Methods for Understanding Complexity: The Use of Formal Methods in Biology David A. Rosenblueth,2016-11-21 The complexity of living organisms surpasses our unaided habilities of analysis Hence computational and mathematical methods are necessary for increasing our understanding of biological systems At the same time there has been a phenomenal recent progress allowing the application of novel formal methods to new domains This progress has spurred a conspicuous optimism in computational biology This optimism in turn has promoted a rapid increase in collaboration between specialists of biology with specialists of computer science Through sheer complexity however many important biological problems are at present intractable and it is not clear whether we will ever be able to solve such problems We are in the process of learning what kind of model and what kind of analysis and synthesis techniques to use for a particular problem Some existing formalisms have been readily used in biological problems others have been adapted to biological needs and still others have been especially developed for biological systems This Research Topic has examples of cases 1 employing existing methods 2 adapting methods to biology and 3 developing new methods We can also see discrete and Boolean models and the use of both simulators and model checkers Synthesis is exemplified by manual and by machine learning methods We hope that the articles collected in this Research Topic will stimulate new research **CMUC ,2016** **Innovative Pharmacometric Approaches to Inform Drug Development and Clinical Use** Zinnia P.
